QUESTION 1

A VMware administrator needs to simplify the placement of virtual machines. The administrator also needs to balance I/O load and space utilization automatically. Which combination of features should the administrator use to achieve this?

- A. Create a Datastore Cluster and enable Storage DRS on the cluster
- B. Create a Datastore Cluster and enable Storage I/O Control on each datastore
- C. Enable Storage DRS and Storage I/O Control on each datastore
- D. Enable Storage I/O Control on each datastore and configure Storage vMotion

Correct Answer: A

QUESTION 2

A vSphere administrator manages a three host cluster with 20 VMs. The HA cluster is configured with the Host Failures the Cluster Tolerates admission control policy and all other settings are set to default values. The administrator determines that one of the VMs is not able to power on. After further inspection, it is determined that this VM cannot power on because of a very large CPU reservation.

Which cluster advanced HA setting can the administrator modify to enable the virtual machine to power on?

- A. Lower das.vmcpumaxmhz attribute value
- B. Higher das.vmcpuminhz attribute value
- C. Lower das.slotcpuoutmhz attribute value
- D. Higher das.slotcpuinhz attribute value

Correct Answer: D

QUESTION 3

A vSphere administrator needs to migrate a virtual machine to another datastore and host without disrupting virtual machine users. Which technique should the vSphere administrator use?

- A. Enhanced vMotion
- B. High Priority vMotion
- C. Low Priority vMotion
- D. Storage vMotion

Correct Answer: A

QUESTION 4

A vSphere administrator needs to add redundancy to an ESXi 5.x management network on a vSphere Standard Switch. Which method should the administrator use to create redundant management networks?

- A. Configure the management network vSwitch with two active uplinks
- B. Configure an additional management portgroup on the same vSwitch
- C. Create a second management network on a second vSwitch in the same subnet
- D. Create a second management network on the same vSwitch in the same subnet

Correct Answer: A

QUESTION 5

An administrator is building a new vSphere Standard Switch with two active uplinks. The physical switch ports for these uplinks are placed in an etherchannel. Which load balancing policy should the administrator use to support the etherchannel configuration?

- A. Route based on IP hash
- B. Route based on the originating virtual port
- C. Route based on source MAC hash
- D. Route based on physical NIC load

Correct Answer: A
