### QUESTION 1

A vSphere administrator needs to enable Fault Tolerance on a virtual machine.

When performing a Storage vMotion migration, which setting should the vSphere administrator change in the virtual machine's disk format to ensure it meets Fault Tolerance requirements?

- A. Thick Provision Eager Zeroed
- B. Thick Provision Lazy Zeroed
- C. Thin Provisioned
- D. Thin Provision Eager Zeroed

Correct Answer: A

---

### QUESTION 2

An administrator is planning a vSphere Fault Tolerance implementation for 6 virtual machines. Which two virtual disk types are supported with FT? (Choose two.)

- A. Raw Device Mapped LUN configured for Virtual Compatibility Mode
- B. Raw Device Mapped LUN configured for Physical Compatibility Mode
- C. Virtual disk thick provisioned, eager zeroed
- D. Virtual disk thick provisioned, lazy zeroed

Correct Answer: AC

---

### QUESTION 3

An administrator creates an ESXi cluster using vSphere Auto Deploy. The ESXi hosts are configured to get a management IP address from a DHCP server. The administrator needs to troubleshoot the management network on one of the hosts.

Which DCUI option should the administrator use to renew the DHCP lease?

- A. Restart Management Network
- B. Restore Network Settings
- C. Test Management Network
- D. Configure Management Network

Correct Answer: A

---

#### QUESTION 4

The administrator has deployed a third-party virtual appliance in the organization's vSphere environment and needs to use Update Manager to maintain the third-party appliance. How should the administrator accomplish this task with the least administrative effort?

- A. Add a new Download Source to Update Manager to obtain updates from the third party
- B. Manually download the third-party updates to Update Manager, which will then apply them to the appliance
- C. Obtain an update tool from the third party and use it to manage updates to the appliance
- D. Identify the third-party appliance from the supported list within Update Manager

Correct Answer: A

---

#### QUESTION 5

An application server has been added to an existing multi-tier application contained in a vApp. Shortly after a planned maintenance event, users are unable to access the application. What does the vSphere administrator need to change to ensure the application can be accessed?

- A. The startup order of the vApp
- B. The shutdown option to power off the virtual machines
- C. The IP Allocation policy to DHCP
- D. The Memory Shares to High

Correct Answer: A
