### QUESTION 1

You have set an alert policy for the disk usage of an ECS instance by using Alibaba Cloud CloudMonitor. Each measurement cycle lasts for 5 minutes, during which the average disk usage is measured. If the average disk usage exceeds 80% for five consecutive measurement cycles, an alert will be reported. After your average disk usage exceeds 80%, how long will it take to receive an alert with the best case scenario?

- A. 30 minutes
- B. 0 minutes
- C. 40 minutes
- D. 20 minutes

Correct Answer: A

---

### QUESTION 2

Border Gateway Protocol (BGP) is mainly used for interconnection between autonomous systems (AS) on the Internet. It controls route transmission and selects the best route. Alibaba Cloud uses a BGP multi-line access mechanism for all its IDCs in China. Which of the following are advantages of a BGP multi-line IDC? (Number of correct answers: 2)

- A. Larger bandwidth
- B. High-speed interconnection
- C. Low bandwidth cost
- D. Elimination of access barriers between North China and South China because China is big and North China and South China has different telecom operators

Correct Answer: BD

---

Select a certificate

3.

Deploy the certificate in front of your Alibaba Cloud resources

4.

Manage the certificate

Correct Answer: B

---

#### QUESTION 4

Alibaba Cloud WAF is a security protection product based on Alibaba Group's web security defense experience accumulated over more than a decade. By defending against common OWASP attacks, providing patches to fix vulnerabilities, and allowing users to customize protection policies for website services, WAF can successfully safeguard the security and availability of websites and web applications. Which of the following types of security configurations does WAF provide? (Number of correct answers 3)

A. Port access control

- B. CC protection
- C. Web application attack protection
- D. Precision access control

Correct Answer: ABC

---

#### QUESTION 5

Various profit-oriented hacker groups exist on the Internet. They control a large number of server resources and can launch network attacks against a target server at any time. Among those, one type of attack is common and destructive, which completely consumes resources of the target server so that normal customers cannot connect to the server. Which of the following belongs to this type of attack?

- A. XSS attack
- B. Webshell attack
- C. DDoS attack
- D. SQL injection

Correct Answer: C
