QUESTION 2

According to Adobe best practices, how should a DevOps Engineer tailor the OSGi service configurations depending on the type of environment?

- A. Leverage configuration files in runmode dedicated folder
- B. Leverage multiple content packages for each environment
- C. Use environment variables to identify the instance and environment type, then load the appropriate configuration files accordingly
- D. Provide default configuration in the content package, and apply the differences using the OSGi console

Correct Answer: A

QUESTION 3

New content is not visible on the website when accessing it via the dispatcher.

Replication from author to publish works fine Dispatcher flush agent is present under /etc/replication/agents.author on the Publish instance, and enabled The checkbox for Dispatcher flush agent configuration is ticked for enabled, when reviewed on the author instance Rules in the dispatcher configuration are correct

Which problem with the dispatcher flush agent is causing this issue?

- A. It does not have enough permissions to receive the activation.
- B. It is not configured properly in the dispatcher configuration.
- C. It is configured properly but uses the incorrect transport user.

D. It is configured properly but located in the wrong path.

Correct Answer: A

QUESTION 4

What are the two benefits of running the version purge maintenance task? (Choose two.)

- A. Increases the system performance
- B. Compacts disk space for unreferenced versions
- C. Reclaims disk space
- D. Cleans up versions that can not be restored
- E. Removes old versions of packages

Correct Answer: CE

QUESTION 5

A client is submitting a form that contains a CSRF token that is passed using the CSRF-Token HTTP header. When looking at the web server access logs the header is printed out, but on the AEM instance the value is not present in the request.

What should the DevOps Engineer configure to make the values available on the AEM instance?

- A. Add the /clientheaders { "CSRF-Token" } in the dispatcher configuration
- B. Add X-Forwarded-Header: CSRF-Token in the virtual host configuration
- C. Add /filter /0001{ /type "allow" /glob "CSRF-Token" } in the dispatcher configuration
- D. Add Header set CSRF-Token in the virtual host configuration

Correct Answer: D
