QUESTION 1

You added a new constructor argument to an existing action controller class.

When you reload the page you get a PHP error that the wrong argument is passed to the class.

How do you fix this?

- A. Clean the page cache
- B. Deploy static content
- C. Clean the /generated/ folder
- D. Clean the config cache

Correct Answer: C

Explanation: <https://magento.stackexchange.com/questions/78826/creating-custom-module-in-magento2show-fatal-error>

QUESTION 2

You have added a new attribute origin of the type varchar to the product entity.

Which two calls will filter a product collection with origin set to "California"? (Choose two.)

- A. `$collection->addFieldToFilter('origin\\', "California");`
- B. `$collection->addAttributeToSelect('origin\\', "California");`
- C. `$collection->joinAttribute('origin\\', 'catalog_product/origin\\', 'origin\\', 'California');`
- D. `$collection->addAttributeToFilter('origin\\', "California");`

Correct Answer: AD

QUESTION 3

There is a custom extension called MyCompany_MyModule. It has the following layout customization

declared in MyCompany/MyModule/view/frontend/layout/default.xml:

What will be the result of the customization?

- A. All store front pages will be non-cacheable
- B. Only the default landing page will be non-cacheable
- C. my.block on the default landing page only will be cached using ESI.
- D. my.block on the all store front pages will be cached using ESI

Correct Answer: A

QUESTION 4

You have created a module controller that responds to the following URL: /mycompany/product/load/id/123.

Which two methods will load the product model by ID as specified in the URL? (Choose two.)

- A. \Magento\Catalog\Model\ResourceModel\Product::load(\$productModel, \$id)
- B. \Magento\Catalog\Model\ResourceModel\Product\Collection::load()->fetchById(\$id)
- C. \Magento\Catalog\Model\ResourceModel\Product\Collection::fetchItemById(\$id)
- D. \Magento\Catalog\Api\ProductRepositoryInterface::getById(\$id)

Correct Answer: BD

QUESTION 5

A custom module is performing an optimized custom query for quote items. The class applies the query customizations on the select object of a quote item collection instance.

```
public function construct(  
    \Magento\Quote\Model\ResourceModel\Quote\Item\Collection $collection  
) {  
    $this->collection = $collection;  
}  
  
public function fetchData()  
{  
    $select = $this->collection->getSelect();  
    ... code modifying $select...  
    return $this->collection->getData();  
}
```

You are tasked to resolve an issue where the query sometimes does not deliver the expected results. You have debugged the problem and found another class is also using a quote item collection and is loading the collection before the custom module. How do you resolve the issue, keeping maintainability in mind?

- A. You change the argument type to `\Magento\Quote\Model\ResourceModel\Quote\Item\CollectionFactory` and instantiate the collection using `$collectionFactory->create();`
- B. You remove the constructor argument and use `ObjectManager::getInstance()->create(\Magento\Quote\Model\ResourceModel\Quote\Item\Collection::class)` to instantiate the collection instead.
- C. You inject `\Magento\Framework\DB>Select` instead of the collection and perform the desired query independently of the collection.
- D. You inject `\Magento\Quote\Api\CartItemRepositoryInterface` because low level query customizations are not allowed.

Correct Answer: A
