QUESTION 1

You add a new Composer dependency utilizing composer require. After testing composer install locally, you add the Composer local and Json files and perform a deployment. The build phase fails as Composer is unable to resolve the dependencies.

Why do this happen/

- A. The versions of PHP on your local environment and integration environment differ
- B. Your commit needs to contain the updated vendor folder
- C. The project cache should have been cleared with the magento-Cloud:project-build- cache command
- D. You did not execute the install locally with --require-dev

Correct Answer: A

QUESTION 2

You need to install a third party extension which is provided in a tar archive.

It expands to a folder Structure in app/code/MyCompany/MyModule.

Which action do you take to install the extension?

- A. Use the composer package command to create a composer package and install it with composer require
- B. Use the composer-merge-plugin to enable support for extension in app/code
- C. Add it to the project in app/code and commit it to git
- D. Request composer repository credentials from the extension vendor

Correct Answer: C

QUESTION 3

Magento Commerce Cloud comes with a variety of additional features that sets it apart from the on-premise Magento Commerce and Magento Open Source platforms.

What feature improves the release update process and simplifies commands to create a backup of the database apply custom patches, and verify environment configuration?

- A. Docker environment
- B. Magento Cloud-specific CU
- C. Cloud configuration wizards
- D. ECE-Tools package

Correct Answer: D

QUESTION 4

You are reviewing a third party extension for Magento Commerce Cloud compatibility.

You discover the module writes to a custom directory called `internal/` within the Magento base directory.

The directory has to be shared by all web servers.

What do you do so the module can be used on Magento Commerce Cloud?

- A. Create a symlink from `/top/internal` to the `internal/` folder
- B. Declare a shared mount for the `internal/directory` in `.magento.app.yaml`
- C. Request the vendor make the directory configurable in the Magento admin
- D. Add a patch for extension so it uses the subdirectory `var/internal/` instead

Correct Answer: B

QUESTION 5

You migrated a live On-Premise application to Magento Commerce Cloud Pro. The performance on Staging and Production is fine.

However, the internal testing team notices overall performance degradation on the Integration environment.

Why is this happening?

- A. The Integration branch uses Platform-as-a-Service shared resources
- B. Xdebug is always enabled on the Integration branch
- C. The Staging and Production environments are consuming all available resources
- D. The Integration branch services have not been optimized in the `.magento/services.yaml` file

Correct Answer: C
