QUESTION 1

A groover is used to _____.

- A. lock seams together.
- B. make sheet metal seams.
- C. open a seam.
- D. fold a seam.

Correct Answer: A

A groover is designed to cause the seams to become flattened and make a watertight seal.

QUESTION 2

The number of cranks a crankshaft has on a V-8 engine is _____.

- A. 6
- B. 4
- C. 3
- D. 8

Correct Answer: D

QUESTION 3

A sheet of aluminum should be cut with _____.

- A. a pair of kitchen scissors
- B. a handsaw
- C. tin snips
- D. a coping saw

Correct Answer: C

QUESTION 4

Most automobile engines are _____.

- A. two-stroke cycle engines

- B. three-stroke cycle engines
- C. four-stroke cycle engines
- D. six-stroke cycle engines

Correct Answer: C

Lawn mowers and outboard engines are two-cycle. They are used wherever horsepower is needed in a lightweight package. They run very fast in order to produce power. Four-cycle engines are used in automobiles, where various conditions exist and load variations are greater. One exception is the rotary or Wankel engine, which uses a rotary design to convert pressure into rotating motion instead of using reciprocating pistons.

QUESTION 5

Which of these is true regarding tire plies?

- A. A "ply rating" tells you approximately how long the tire should last.
- B. They connect the bead to the tread.
- C. Plies can be radial, bias, or belted bias.
- D. Their job is to protect the tire from curb impact.

Correct Answer: C
