QUESTION 1

A system admin wants to add more zones to the existing ELB. The system admin wants to perform this activity from CLI. Which of the below mentioned command helps the system admin to add new zones to the existing ELB?

A. elb-enable-zones-for-lb

B. elb-add-zones-for-lb

C. It is not possible to add more zones to the existing ELB

D. elb-configure-zones-for-lb

Correct Answer: A

Explanation:

The user has created an Elastic Load Balancer with the availability zone and wants to add more zones to

the existing ELB. The user can do so in two ways:

1.

From the console or CLI

2.

add new zones to ELB

QUESTION 2

A company recently performed a security audit of all its internal applications developed in house. Certain business-critical applications that handle sensitive data were flagged because they use Amazon ES clusters that are open for read/write to a wider user group that intended.

Who is responsible for correcting the issue?

A. AWS Premium Support

B. the Amazon ES team

C. the AWS IAM team

D. a SysOps Administrator

Correct Answer: A

QUESTION 3

A company website hosts patches for software that is sold globally. The website runs in AWS and performs well until a large software patch is released. The flood of downloads puts a strain on the web servers and leads to a poor customer experience.

What can the SysOps Administrator propose to enhance customer experience, create a more available web platform, and keep costs low?

A. Use an Amazon CloudFront distribution to cache static content, including software patches

B. Increase the size of the NAT instance to improve throughput

C. Scale out of web servers in advance of patch releases to reduce Auto Scaling delays

D. Move the content to IO1 and provision additional IOPS to the volume that contains the software patches

Correct Answer: A

QUESTION 4

An organization has hired an external firm to audit unauthorized changes on the company\\'s AWS environment, the external auditor needs appropriate access.

How can this be accomplished?

A. Create an IAM user and assign them a new policy with GetResourcesaccess on AWS Artifact

B. Create an IAM user and add them to the existing "Administrator" IAM group

C. Create an IAM user and assign them a new IAM policy with read access to the AWS CloudTrail logs in Amazon S3

D. Create an IAM user and assign them a new policy with ListFindingsaccess on Amazon Inspector

Correct Answer: C

QUESTION 5

A company needs to implement a system for object-based storage in a write-once, read-many (WORM) model. Objects cannot be deleted or changed after they are stored, even by an AWS account root user or administrators.

Which solution will meet these requirements?

A. Set up Amazon S3 Cross-Region Replication and run daily updates.

B. Set up Amazon S3 Object Lock in governance mode with S3 Versioning enabled.

C. Set up Amazon S3 Object Lock in compliance mode with S3 Versioning enabled.

D. Set up an Amazon S3 Lifecycle policy to move the objects to Amazon S3 Glacier.

Correct Answer: B
