QUESTION 1

You are the global administrator for an Azure Active Directory (Azure AD) tenant named adatum.com. From the Azure Active Directory blade, you assign the Conditional Access Administrator role to a user You need to ensure that Admin1 has just-in-time access as a conditional access administrator.

What should you do next?

A. Enable Azure AD Multi-Factor Authentication (MFA).

B. Set Admin1 as Eligible for the Privileged Role Administrator role.

C. Admin1 as Eligible for the Conditional Access Administrator role.

D. Enable Azure AD Identity Protection.

Correct Answer: A

Require MFA for admins is a baseline policy that requires MFA for the following directory roles: Global administrator SharePoint administrator Exchange administrator Conditional access administrator Security administrator

https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/baseline-protection

QUESTION 2

You need to implement App2 to meet the application? To answer, select the appropriate options in the answer area. NOTE:Each correct selection is worth one point.

Hot Area:

App Service plan pricing tier:
- Isolated
- Shared
- Standard

Enabled feature:
- Always
- Auto Swap
- Web Sockets

Correct Answer:

App Service plan pricing tier:

Isolated
Shared
Standard

Enabled feature:

Always
Auto Swap
Web Sockets

Box 1: Standard

Not Shared: A Shared plan does not support Always on.

Box 2: Always on

If your function app is on the Consumption plan, there can be up to a 10-minute delay in processing new blobs if a function app has gone idle. To avoid this cold-start delay, you can switch to an App Service plan with Always On enabled, or

use a different trigger type.

Scenario: A newly developed API must be implemented as an Azure function named App2.

App2 will use a blob storage trigger. App2 must process new blobs immediately.

App2 must be able to connect directly to the private IP addresses of the Azure virtual machines. App2 will be deployed directly to an Azure virtual network.

The cost of App1 and App2 must be minimized.

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure subscription named Subscription1. Subscription1 contains a resource group named RG1. RG1 contains resources that were deployed by using templates.

You need to view the date and time when the resources were created in RG1.

Solution: From the RG1 blade, you click Automation script.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 4

Note This question is part of a series of questions that present the same seer Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You manage a virtual network named VNet1 that is hosted in the West US Azure region.

VNet1 hosts two virtual machines named VM1 and VM2 that run Windows Server.

You need to inspect all the network traffic from VM1 to VM2 for a period of three hours.

Solution: From Performance Monitor, you create a Data Collector Set (DCS)

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

You should use Azure Network Watcher.

---

QUESTION 5

You need to deploy an application gateway named appgwl015 to meet the following requirements:

Load balance internal IP traffic to the Azure virtual machines connected to subnet0.

Provide a Service Level Agreement (SLA) of 99.99 percent availability for the Azure virtual machines.

What should you do from the Azure portal?

A. Check the answer in explanation.

Correct Answer: A

See below.

Step 1:

Click New found on the upper left-hand corner of the Azure portal.

Step 2:

Select Networking and then select Application Gateway in the Featured list.

Step 3:

Enter these values for the application gateway:

appgw1015 - for the name of the application gateway.

SKU Size: Standard_V2

The new SKU [Standard_V2] offers autoscaling and other critical performance enhancements.

Step 4:

Accept the default values for the other settings and then click OK.

Step 5:

Click Choose a virtual network, and select subnet0.
