### QUESTION 1

You have an SAP HANA on Azure (Large Instances) deployment that has two Type II SKU nodes. Each node is provisioned in a separate Azure region.

You need to monitor storage replication for the deployment.

What should you use?

- A. xfsdump
- B. azacsnap
- C. rear
- D. tar

Correct Answer: A

---

### QUESTION 2

You plan to automate a deployment of SAP NetWeave on Azure virtual machines by using Azure Resource Manager templates. The database tier will consist of two instances of an Azure Marketplace Microsoft SQL Server 2017 virtual machine image that each has 8 TB of RAM.

Which task should you include in the templates used to deploy the SQL Server virtual machines?

- A. Enable buffer pool extensions in SQL Server.
- B. Enable read caching on the disks used to store the SQL Server database log files.
- C. Run the SQL Server setup and specify the /ACTION=REBUILDDATABASE and /SQLCOLLATION switches.
- D. Run the SQL Server setup and specify the /ACTION=INSTALL and /SQLMAXMEMORY switches.

Correct Answer: D

---

### QUESTION 3

You have an SAP environment that is managed by using VMware vCenter.

You plan to migrate the SAP environment to Azure.

You need to gather information to identify which compute resources are required in Azure.

What should you use to gather the information?

- A. Azure Migrate and SAP EarlyWatch Alert reports

- B. Azure Site Recovery and SAP Quick Sizer
- C. SAP Quick Sizer and SAP HANA system replication
- D. Azure Site Recovery Deployment Planner and SAP HANA Cockpit

Correct Answer: A

Azure Migrate is a Microsoft service that helps an enterprise assess how its on-premises workloads will perform, and how much they will cost to host, in the Azure public cloud. An enterprise can use Azure Migrate to discover information about the VMware VMs running within its own data center, including CPU and memory usage, as well as performance history.

SAP EarlyWatch Alert (EWA) is a monitoring service for SAP customers, to monitor SAP systems in the solution landscape.

Incorrect Answers:

D: SAP HANA Cockpit is an administrative tool with a web interface for a correspondingly named database engine, a part of SAP ERP software. It allows both offline and cloud operations for managing databases,

#### QUESTION 4

##### HOTSPOT

Your on-premises network contains SAP and non-SAP applications. ABAP-based SAP systems are integrated with IDAP and use user name/password-based authentication for logon.

You plan to migrate the SAP applications to Azure.

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE:

Each correct selection is worth one point.

Hot Area:

Statements	Yes	No
Azure Active Directory (Azure AD) pass-through authentication enables users to connect to the ABAP-based SAP systems on Azure by using their on-premises user name/password.	<input type="radio"/>	<input type="radio"/>
Azure Active Directory (Azure AD) password hash synchronization enables users to connect to the ABAP-based SAP systems on Azure by using their on-premises user name/password.	<input type="radio"/>	<input type="radio"/>
Active Directory Federation Services (AD FS) supports authentication between on-premises Active Directory and Azure systems that use different domains.	<input type="radio"/>	<input type="radio"/>

Correct Answer:

Statements	Yes	No
Azure Active Directory (Azure AD) pass-through authentication enables users to connect to the ABAP-based SAP systems on Azure by using their on-premises user name/password.	<input type="radio"/>	<input checked="" type="radio"/>
Azure Active Directory (Azure AD) password hash synchronization enables users to connect to the ABAP-based SAP systems on Azure by using their on-premises user name/password.	<input type="radio"/>	<input checked="" type="radio"/>
Active Directory Federation Services (AD FS) supports authentication between on-premises Active Directory and Azure systems that use different domains.	<input checked="" type="radio"/>	<input type="radio"/>

### QUESTION 5

You plan to deploy an SAP production landscape that uses SAP HANA databases on Azure.

You need to configure the storage infrastructure to support the SAP HANA deployment

The solution must meet the SAP issued requirements for data throughput and I/O.

How should you configure the storage?

- A. RAID1
- B. RAID5
- C. RAID0
- D. RAID6

Correct Answer: B
