QUESTION 1

You have an Azure Virtual Desktop host pool named Pool1 in the East US region.

You have a storage account named storage1 that contains FSLogix profile containers. In the East US region, you have a shared image gallery named SG1 that contains a virtual machine image named Image1. Image1 is used to create new

session hosts in Pool1.

You plan to deploy a new Azure Virtual Desktop host pool named Pool2 to the South India region.

You need to implement a session host deployment solution for Pool2 that meets the following requirements:

1.

Image1 must replicate in the South India region.

2.

The session hosts in Pool2 must be based on Image1.

3.

Changes to Image1 must be available in the South India and East US regions. What should you include in the solution?

A. Create a new shared image gallery named SIG2 in the South India region. Upload a copy of Image1 to SIG2.

B. Create a new Azure Storage account named storage2 in the South India region. Copy Image1 to a shared folder in storage2.

C. From SIG1, update the replication for the latest image version of Image1.

D. Configure geo-redundant storage (GRS) replication for storage1. Copy the VHD file of Image1 to the FSLogix profile container.

QUESTION 2

HOTSPOT

You have an Azure subscription.

You plan to deploy an Azure Virtual Desktop solution that will contain Windows 10 multi-session hosts in a single host pool. The solution has the requirements shown in the following table.

Answer Area

HostPool1:

	▼
Availability zones	
Azure Backup	
Azure Site Recovery	
Azure Traffic Manager	

storage1:

	▼
Geo-redundant storage (GRS)	
Geo-zone-redundant storage (GZRS)	
Locally-redundant storage (LRS)	
Zone-redundant storage (ZRS)	

You need to configure the session host for the host pool. The solution must minimize costs.

How many session hosts should the host pool contain, and how many vCPUs should each session host have? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.
