QUESTION 1

HOT SPOT

You develop a microservice solution for a company.

The solution uses the Actor design pattern for all services including mapping, GPS, and communication. The mapping and communication systems must persist state on disk. The GPS system must persist state in-memory. All Actors must

have a service replica count of three.

You need to implement code for the GPS system.

How should you complete the code segment? To answer, select the appropriate options in the answer area;

NOTE: Each correct selection is worth one point.

Hot Area:

The screenshot shows an 'Answer Area' with a code editor and a configuration panel. The code defines an interface `IGPS_System : IActor` with methods `GetCountAsync` and `SetCountAsync`. Below the interface is the start of an `internal class GPS_System` with a `[StatePersistence(StatePersistenceType: ...)]` attribute. The configuration panel has three dropdown menus: the first is set to 'Persisted', the second to 'Actor', and the third to 'Actor, IActor, IGPS_System, ActorService'.

Correct Answer:

Answer Area

```
public interface IGPS_System : IActor
{
    Task<int> GetCountAsync(CancellationTokens cancellationTokens);
    Task SetCountAsync(int count, CancellationTokens cancellationTokens);
}
[StatePersistence(StatePersistence.Volatile)]
internal class GPS_System : ActorService
{
    // ...
}
```

www.PassApply.com

Answer Area

```
public interface IGPS_System : IActor
{
    Task<int> GetCountAsync(CancellationTokens cancellationTokens);
    Task SetCountAsync(int count, CancellationTokens cancellationTokens);
}
[StatePersistence(StatePersistence.Volatile)]
internal class GPS_System : ActorService
{
    // ...
}
```

QUESTION 2

HOT SPOT

A company provides web app hosting services for customers.

You have a set of App Service Plans available to deploy resources for new projects. The available service tiers are shown in the Service Tiers exhibit. (Click the Service Tiers tab.)

You must provision resources for the projects as shown in the Projects exhibit. (Click the Projects tab.)

Project	URL
Adventure Works Cycles	http://adventureworkscycles.com
Coho Vineyard	http://cohovineyard.com
Trey Research	http://treyresearch.azurewebsites.net

The AdventureWorks project requires the use of deployment slots as shown in the Deployment Slots exhibit. (Click the Deployment Slots tab.)

You need to determine where to deploy resources for each project.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

AdventureWorks Cycles must be hosted on one of the shared plans.	Yes	No
Trey Research must be hosted on one of the prototype plans.	<input type="radio"/>	<input type="radio"/>
Coho Vineyard must be hosted on one of the dedicated plans.	<input type="radio"/>	<input type="radio"/>

Correct Answer:

Answer Area

AdventureWorks Cycles must be hosted on one of the shared plans.	Yes	No
Trey Research must be hosted on one of the prototype plans.	<input checked="" type="radio"/>	<input type="radio"/>
Coho Vineyard must be hosted on one of the dedicated plans.	<input type="radio"/>	<input checked="" type="radio"/>

Answer Area

AdventureWorks Cycles must be hosted on one of the shared plans.	Yes	No
Trey Research must be hosted on one of the prototype plans.	<input checked="" type="radio"/>	<input type="radio"/>
Coho Vineyard must be hosted on one of the dedicated plans.	<input type="radio"/>	<input checked="" type="radio"/>

QUESTION 3

HOT SPOT

You are developing a ticket reservation system for an airline.

The storage solution for the application must meet the following requirements:

Ensure at least 99.99% availability and provide low latency.

Accept reservations even in network outages or other unforeseen failures.

Process reservations in the exact sequence as reservations are submitted to minimize overbooking or selling the same seat to multiple travelers.

Allow simultaneous and out-of-order reservations with a maximum five-second tolerance window.

You provision a resource group named `airlineResourceGroup` in the Azure South-Central US region.

You need to provision a SQL API Cosmos DB account to support the app.

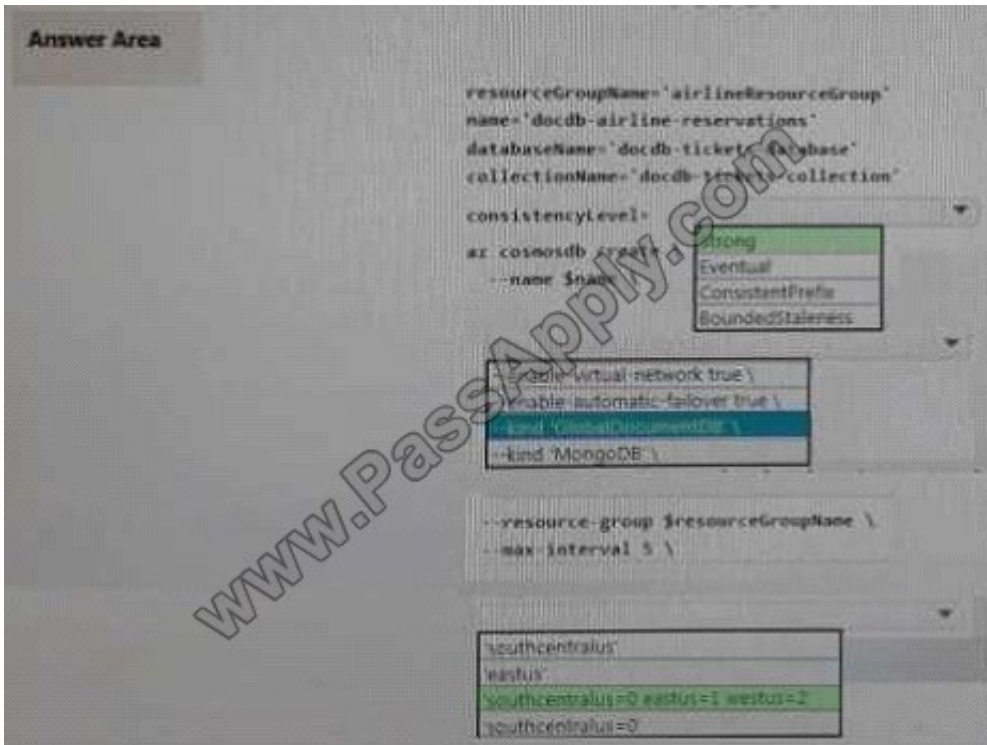

How should you complete the Azure CLI commands? To answer, select the appropriate options in the answer area;

NOTE: Each correct selection is worth one point.

Hot Area:

```
resourceGroupName='airlineResourceGroup'
name='docdb-airline-reservations'
databaseName='docdb-ticket-database'
collectionName='docdb-tickets/collection'
consistencyLevel=
az cosmosdb create --name $name --resource-group $resourceGroupName --max-interval 5 --kind MongoDB --enable-vm-network true --enable-automatic-failover true --kind GlobalDocumentDB
--resource-group $resourceGroupName \
--max-interval 5 \
southcentralus
westus
southcentralus=0 eastus=1 westus=2
southcentralus=0
```

Correct Answer:

QUESTION 4

DRAG DROP

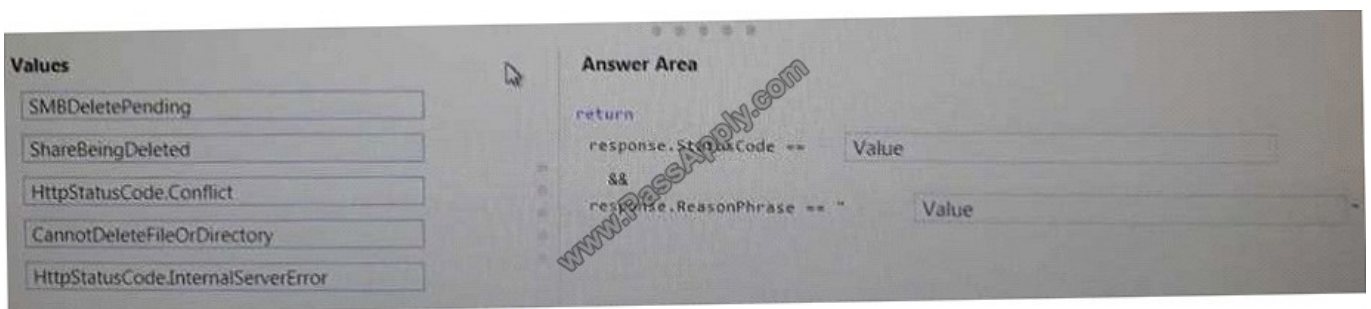

You need to ensure the upload format issue is resolved.

What code should you add at line RU14?

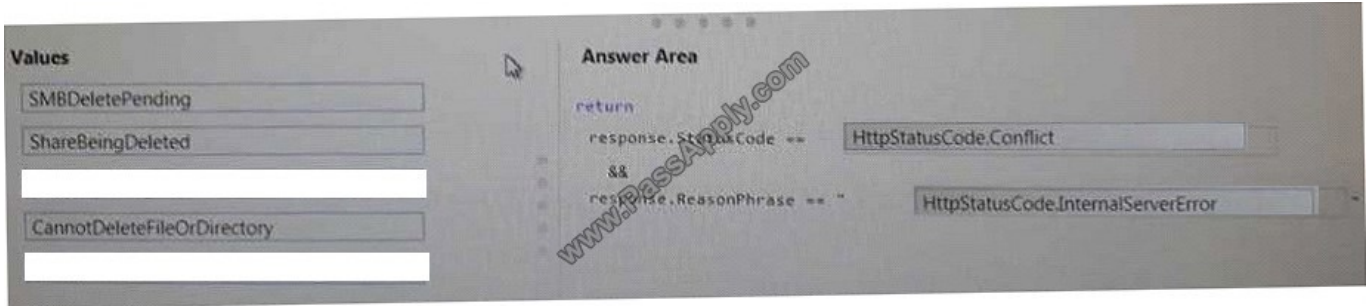

To answer, drag appropriate code fragments to the correct locations. Each code fragment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Correct Answer:

QUESTION 5

Note: This question is part of a series of questions that present the same scenario solution meets the stated goals. You have the following resource groups:

Resource group	Comments
DevServer_WestCentralUS	This resource group is located in the West Central US region and contains a single virtual machine named DevServer. DevServer is connected to a private subnet in an Azure Virtual Network that has no internet access.
Workstation_EastUs	This resource group is located in the East US region and contains a virtual machine named DevWorkstation. DevWorkstation is connected to a subnet in a Virtual Network and is configured with a public IP address. A network security group has been configured to allow public incoming remote desktop protocol (RDP) connections to the DevWorkstation.

Developers must connect to DevServer only through DevWorkstation. To maintain security, DevServer must not accept connections from the internet You need to create a private connection between the DevWorkstation and DevServer.

Solution: Configure a public IP address on DevServer_WestCentral. Configure the Network Security Group to allow all incoming ports.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: B
