-  **800,000+** Satisfied Customers

QUESTION 1

A company is migrating an existing on-premises third-party website to Azure. The website is stateless.

The company does not have access to the source code for the website. They have the original installer.

The number of visitors at the website varies throughout the year. The on-premises infrastructure was resized to accommodate peaks but the extra capacity was not used.

You need to implement a virtual machine scale set instance.

What should you do?

- A. Use an autoscale setting with unlimited maximum number of instances.
- B. Use an autoscale setting to scale instances vertically.
- C. Use only default diagnostics metrics to trigger autoscaling.
- D. Use an autoscale setting to define one or more profiles that have one or more autoscale rules.

Correct Answer: D

With Azure Monitor you can auto scale by custom metric for Virtual Machine Scale Sets.

Note: By default, Resource Manager-based Virtual Machines and Virtual Machine Scale Sets emit basic (host-level) metrics. In addition, when you configure diagnostics data collection for an Azure VM and VMSS, the Azure diagnostic extension also emits guest-OS performance counters (commonly known as "guest-OS metrics"). You use all these metrics in autoscale rules.

Note 2: In-guest VM metrics with the Azure diagnostics extension

The Azure diagnostics extension is an agent that runs inside a VM instance. The agent monitors and saves performance metrics to Azure storage. These performance metrics contain more detailed information about the status of the VM,

such as AverageReadTime for disks or PercentIdleTime for CPU. You can create autoscale rules based on a more detailed awareness of the VM performance, not just the percentage of CPU usage or memory consumption.

QUESTION 2

You have an Azure subscription that contains 10 virtual machines on a virtual network. You need to create a graph visualization to display the traffic flow between the virtual machines. What should you do from Azure Monitor?

- A. From Activity log, use quick insights.

- B. From Metrics, create a chart.
- C. From Logs, create a new query.
- D. From Workbooks, create a workbook.

Correct Answer: C

Navigate to Azure Monitor and select Logs to begin querying the data Reference: <https://azure.microsoft.com/en-us/blog/analysis-of-network-connection-data-with-azure-monitor-for-virtual-machines/>

QUESTION 3

You have an Azure web app that runs in a Premium App Service plan.

Developers plan to update the app weekly.

You need to ensure that the app can be switched from the current version to the new version. The solution must meet the following requirements

1.
Provide the developers with the ability to test the app in Azure prior to switching versions. Testing must use the same app instance.
 2.
Ensure that the app version can be rolled back.
 3.
Minimize downtime.
- What should you do?
- A. Create a deployment slot.
 - B. Add an instance of the app to the scale set.
 - C. Copy the App Service plan.
 - D. Create an Azure Active Directory (Azure AD) enterprise application.

Correct Answer: D

QUESTION 4

You have an Azure subscription that contains a resource group named RG1. RG1 contains multiple resources.

You need to trigger an alert when the resources in RG1 consume \$1,000 USD.

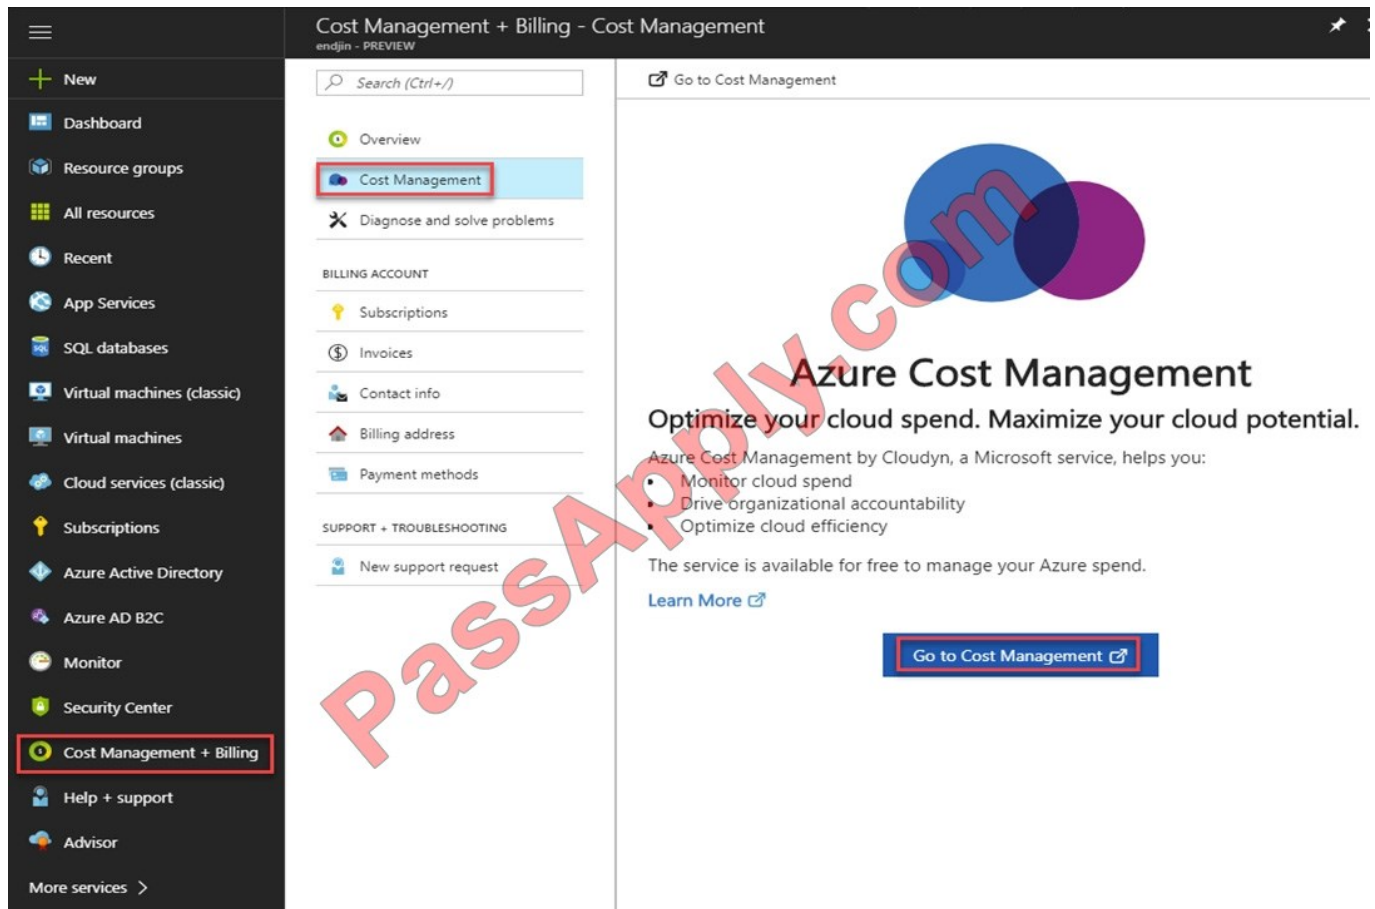

What should you do?

- A. From Cost Management + Billing, add a cloud connector.
- B. From the subscription, create an event subscription.
- C. From Cost Management + Billing create a budget.
- D. From RG1, create an event subscription.

Correct Answer: C

Create budgets to manage costs and create alerts that automatically notify you are your stakeholders of spending anomalies and overspending. To set it up, go to the Azure Portal, select '\\Cost Management + Billing\\' -> '\\Cost Management\\' -> '\\Go to Cost Management\\'.

QUESTION 5

You need to debug the user greeting issue. What should you use?

- A. Azure Application Insights
- B. Bot Framework Emulator
- C. Bot Framework Channel Inspector
- D. Bot Connector service

E. Azure Compote Emulator

Correct Answer: A
