QUESTION 1

DRAG DROP

You are configuring network connectivity for two Azure virtual networks named VNET1 and VNET2.

You need to implement VPN gateways for the virtual networks to meet the following requirements:

1.

VNET1 must have six site-to-site connections that use BGP.

2.

VNET2 must have 12 site-to-site connections that use BGP.

3.

Costs must be minimized.

Which VPN gateway SKU should you use for each virtual network? To answer, drag the appropriate SKUs to the correct networks. Each SKU may be used once, more than once, or not at all. You may need to drag the split bar between

panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

SKUs		Answer Area
Basic	VpnGw1	VNET1: <input type="text"/>
VpnGw2	VpnGw3	VNET2: <input type="text"/>

Correct Answer:

SKUs		Answer Area
Basic	VpnGw1	VNET1: <input type="text" value="VpnGw1"/>
VpnGw2	VpnGw3	VNET2: <input type="text" value="VpnGw1"/>

QUESTION 2

You are troubleshooting a security issue for an Azure Storage account.

You enable Azure Storage Analytics logs and archive it to a storage account.

What should you use to retrieve the diagnostics logs?

- A. Azure Monitor
- B. SQL query editor in Azure
- C. File Explorer in Windows
- D. Azure Storage Explorer

Correct Answer: D

QUESTION 3

You plan to use Azure Resource Manager templates to perform multiple deployments of identically configured Azure virtual machines. The password for the administrator account of each deployment is stored as a secret in different Azure key vaults.

You need to identify a method to dynamically construct a resource ID that will designate the key vault containing the appropriate secret during each deployment. The name of the key vault and the name of the secret will be provided as inline parameters.

What should you use to construct the resource ID?

- A. a key vault access policy
- B. a linked template
- C. a parameters file
- D. an automation account

Correct Answer: B

You reference the key vault in the parameter file, not the template. The following image shows how the parameter file references the secret and passes that value to the template.

Reference: <https://docs.microsoft.com/en-us/azure/azure-resource-manager/resource-manager-keyvault-parameter>

QUESTION 4

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

Your Company's Azure subscription includes a virtual network that has a single subnet configured.

You have created a service endpoint for the subnet, which includes an Azure virtual machine that has Ubuntu Server 18.04 installed.

You are preparing to deploy Docker containers to the virtual machine. You need to make sure that the containers can access Azure Storage resources and Azure SQL databases via the service endpoint.

You need to perform a task on the virtual machine prior to deploying containers.

Solution: You create an application security group.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 5

You have multiple development teams that will create apps in Azure.

You plan to create a standard development environment that will be deployed for each team.

You need to recommend a solution that will enforce resource locks across the development environments and ensure that the locks are applied in a consistent manner.

What should you include in the recommendation?

A. an Azure policy

B. an Azure Resource Manager template

C. a management group

D. an Azure blueprint

Correct Answer: D

Reference: <https://docs.microsoft.com/en-us/azure/governance/blueprints/concepts/resource-locking>
