QUESTION 1

A company migrates an on-premises Windows virtual machine (VM) to Azure. An administrator enables backups for the VM by using the Azure portal.

The company reports that the Azure VM backup job is failing.

You need to troubleshoot the issue.

Solution: Configure the retention range for the current VM backup policy.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: B

It is unlikely that configuring the retention range for the current VM backup policy would resolve the issue of the Azure VM backup job failing after enabling backups for the VM through the Azure portal. To troubleshoot the issue, the

administrator should first check the Azure VM backup job logs and identify the specific error message or code provided. This can help identify the underlying issue and the appropriate solution. Therefore, the solution mentioned in the question

is incorrect and the answer is B. No.

Troubleshoot Azure VM backup failures (Microsoft documentation)

QUESTION 2

HOTSPOT

A company named Contoso connects its on-premises resources to Azure by using ExpressRoute.

An administrator reports that the circuit is in a failed state.

You need to resolve the issue.

How should you complete the PowerShell commands?

Hot Area:

Correct Answer:

QUESTION 3

A company manages a solution that uses Azure Functions.

A function returns the following error: Azure Function Runtime is unreachable.

You need to troubleshoot the issue.

What are two possible causes of the issue?

A. The execution quota is full.

B. The company did not configure a timer trigger.

C. The storage account application settings were deleted.

D. The function key was deleted.

E. The storage account for the function was deleted.

Correct Answer: CE

Two possible causes of the issue where a function returns the error "Azure Function Runtime is unreachable" are: C. The storage account application settings were deleted. E. The storage account for the function was deleted.

According to Microsoft, this issue occurs when the Functions runtime can\\'t start. The most common reason for this is that the function app has lost access to its storage account. If that account is deleted or if the storage account application settings were deleted, your functions won\\'t work

QUESTION 4

A company migrates an on-premises Windows virtual machine (VM) to Azure. An administrator enables backups for the VM by using the Azure portal.

The company reports that the Azure VM backup job is failing.

You need to troubleshoot the issue.

Solution: Install the VM guest agent by using administrative permissions. Does the solution meet the goal?

A. Yes

B. No

Correct Answer: A

Yes, installing the VM guest agent by using administrative permissions could resolve the issue of the Azure VM backup job failing after enabling backups for the VM through the Azure portal. When backing up a virtual machine in Azure, it is

necessary to install the VM guest agent to enable proper communication between the VM and the backup service. An administrative user account is required to install the agent. Therefore, the solution mentioned in the question is correct and

the answer is A. Yes.

Back up a virtual machine in Azure (Microsoft documentation)

QUESTION 5

A company has an ExpressRoute gateway between their on-premises site and Azure. The ExpressRoute gateway is on a virtual network named VNet1. The company enables FastPath on the gateway. You associate a network security group

(NSG) with all of the subnets.

Users report issues connecting to VM1 from the on-premises environment. VM1 is on a virtual network named VNet2. Virtual network peering is enabled between VNet1 and VNet2.

You create a flow log named FlowLog1 and enable it on the NSG associated with the gateway subnet.

You discover that FlowLog1 is not reporting outbound flow traffic.

You need to resolve the issue with FlowLog1.

What should you do?

A. Configure FlowLog1 for version 2.

B. Create the storage account for FlowLog1 as a premium block blob.

C. Configure the FlowTimeoutInMinutes property on VNet2 to a non-null value.

D. Enable FlowLog1 in a network security group associated with the network interface of VM1.

Correct Answer: A

According to 1, flow logging using ExpressRoute Traffic Collector requires version 2 of flow logs. Version 1 of flow logs does not support ExpressRoute Traffic Collector. You can configure the version of flow logs when you enable them on a network security group (NSG).
