QUESTION 1

HOTSPOT

You need to configure Azure File Sync to meet the file sharing requirements.

What should you do? To answer, select the appropriate options in the answer area.

NOTE Each correct selection is worth one point.

Hot Area:

Minimum number of sync groups to create:

1
2
3
4

Minimum number of Storage Sync Services to create:

1
2
3
4

Correct Answer:

Minimum number of sync groups to create:

1
2
3
4

Minimum number of Storage Sync Services to create:

1
2
3
4

Reference: https://docs.microsoft.com/en-us/azure/storage/file-sync/file-sync-planning
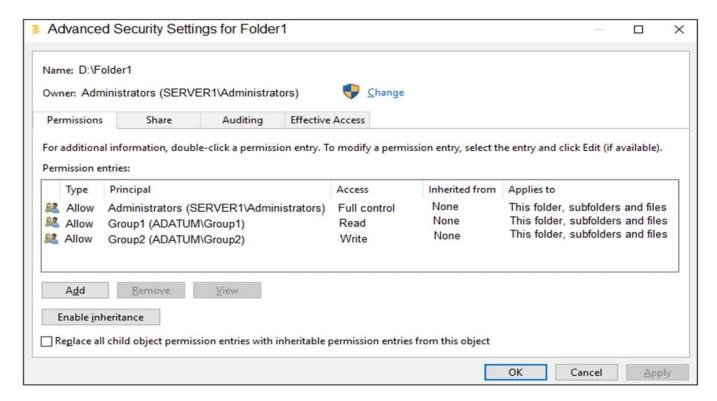

QUESTION 2

HOTSPOT

Your network contains an Active Directory Domain Services (AD DS) domain named adatum.com. The domain contains a server named Server1 and the users shown in the following table.

Name	Member of
User1	Group1
User2	Group2
User3	Group3

Server1 contains a folder named D:\Folder1. The advanced security settings for Folder1 are configured as shown in the Permissions exhibit. (Click the Permissions tab.)

Folder1 is shared by using the following configurations:

```
Path                   : D:\Folder1
Name                   : Share1
ShareType              : FileSystemDirectory
FolderEnumerationMode  : Unrestricted
```

The share permissions for Share1 are shown in the following table.

Group	Permission
Group1	Allow – Change
Group3	Allow – Full Control

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
User1 can read the files in Share1.	○	○
User3 can delete files in Share1.	○	○
If User2 connects to \\Server1.adatum.com from File Explorer, Share1 will be listed.	○	○

Correct Answer:

Answer Area

Statements	Yes	No
User1 can read the files in Share1.	●	○
User3 can delete files in Share1.	○	●
If User2 connects to \\Server1.adatum.com from File Explorer, Share1 will be listed.	●	○

To access files in a shared folder, you need to be granted permissions on the folder (NTFS permissions) AND permissions on the share. The most restrictive permission of the folder permissions and share permissions apply.

Box 1: Yes

Group1 has Read access to Folder1 and Change access to Share1. Therefore, User1 can read the files in Share1.

Box 2: No

Group3 has Full Control access to Share1. However, Group3 has no permissions configured Folder1. Therefore, User3 cannot access the files in Share1.

Box 3: Yes

Group2 has write permission to Folder1. However, Group2 has no permission on Share1. Therefore, users in Group2 cannot access files in the shared folder.

Access Based Enumeration when enabled hides files and folders that users do not have permission to access. However, Access Based Enumeration is not enabled on Share1. This is indicated by the FolderEnumerationMode

QUESTION 3

You have an Azure virtual machine named VM1 that runs Windows Server.

You need to configure the management of VM1 to meet the following requirements:

1.

Require administrators to request access to VM1 before establishing a Remote Desktop connection.

2.

Limit access to VM1 from specific source IP addresses.

3.

Limit access to VM1 to a specific management port. What should you configure?

A. a network security group (NSG)

B. Azure Active Directory (Azure AD) Privileged Identity Management (PIM)

C. Microsoft Defender for Cloud

D. Azure Front Door

Correct Answer: C

Reference: https://docs.microsoft.com/en-us/azure/defender-for-cloud/just-in-time-access-usage?tabs=jit-config-asc%2Cjit-request-asc

QUESTION 4

HOTSPOT

You plan to deploy an Azure virtual machine that will run Windows Server.

You need to ensure that an Azure Active Directory (Azure AD) user named user1@contoso.com can connect to the virtual machine by using the Azure Serial Console.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Configure on the Azure virtual machine:

Boot diagnostics with a custom storage account
Operating system guest diagnostics
A system-assigned managed identity

Assign the following role to User1:

Virtual Machine Contributor
Virtual Machine Administrator Login
Virtual Machine User Login

Correct Answer:

Answer Area

Configure on the Azure virtual machine: ▼

Boot diagnostics with a custom storage account
Operating system guest diagnostics
A system-assigned managed identity

Assign the following role to User1: ▼

Virtual Machine Contributor
Virtual Machine Administrator Login
Virtual Machine User Login

Reference: https://docs.microsoft.com/en-us/troubleshoot/azure/virtual-machines/serial-console-overview

QUESTION 5

Take two steps to implement an availability solution for DHCP. You must meets the networking requirements.

Choose the correct action from the following options.

NOTE: Each correct selection is worth one point.

A. Add the DHCP cluster role on each DHCP server and install the Failover Clustering feature

B. Configure a DHCP relay on the router in each office.

C. Configure a scope that contains 25 percent of the IP addresses from Scope1 on DHCP2.

D. Create a scope that contains 25 percent of the IP addresses from Scope2 On DHCP1.

E. Configure DHCP failover on each DHCP scope

Correct Answer: AE
