### QUESTION 1

You have a failover cluster named Cluster1 that has the following configurations:

Number of nodes: 6 Quorum: Dynamic quorum Witness: File share, Dynamic witness

What is the maximum number of nodes that can fail simultaneously while maintaining quorum?

- A. 1
- B. 2
- C. 3
- D. 4
- E. 5

Correct Answer: C

Note this question is asking about nodes failing `simultaneously\\`, not nodes failing one after the other.

With six nodes and one witness, there are seven votes. To maintain quorum there needs to be four votes available (four votes is the majority of seven). This means that a minimum of three nodes plus the witness need to remain online for the

cluster to function. Therefore, the maximum number of simultaneous failures is three.

### QUESTION 2

You deploy Azure Migrate to an on-premises network.

You have an on-premises physical server named Server1 that runs Windows Server and has the following configuration.

\*

Operating system disk 600 GB

\*

Data disc 3 TB

\*

NIC Teaming: Enabled

\*

Mobility service: installed

\*

Windows Firewall: Enabled

\*

Microsoft Defender Antivirus: Enabled

You need to ensure that you can use Azure Migrate to migrate Server1.

Solution: You disable NIC Teaming on Server1.

Does this meet the goal?

A.

Yes

B.

No

Correct Answer: B

---

### QUESTION 3

You have an Azure virtual machine named VM1 that has the Web Server (IIS) server role installed. VM1 hosts a critical line-of-business (LOB) application.

After the security team at your company deploys a new security baseline to VM1, users begin reporting that the application is unresponsive.

You suspect that the security baseline has caused networking issues.

You need to perform a network trace on VM1.

What should you do?

A. From VM1, run netsh.

B. From Performance Monitor on VM1, create a Data Collector Set.

C. From the Azure portal, configure the Diagnostics settings for VM1.

D. From the Azure portal, configure the Performance diagnostics settings for VM1.

Correct Answer: D

### QUESTION 4

Which domain controller should be online to meet the technical requirements for DC4?

A. DC1

B. DC2

C. DC3

Correct Answer: A

## QUESTION 5

### HOTSPOT

You have an on-premises server named Server1 and Microsoft Sentinel instance.

You plan to collect windows Defender Firewall events from Sever1 and analyze the event data by using Microsoft Sentinel.

What should you install on Server1, and which information should you provide during the instance? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

|          |  |
|----------|--|
| Install: | <div><div></div><div>The Azure Log Analytics gateway</div><div>The Azure Monitor agent</div><div>The Microsoft Azure Recovery Services (MARS) agent</div></div>  |
| Provide: | <div><div></div><div>The Azure subscription ID and the Microsoft Sentinel name</div><div>The Azure Storage account and the storage account access key</div><div>The Azure Log Analytics workspace ID and the workspace key</div><div>The Microsoft Sentinel instance name and Azure AD credentials</div></div> |

Correct Answer:

|          |  |
