QUESTION 1

An Architect to notify by the Business that order conversion dramatically dropped a few hours after go live. Further investigation points out that customers cannot proceed to checkout anymore. The Architect is aware that a custom inventory check with a third-party API is enforced at the beginning of checkout, and that customers are redirected to the basket page when items are no longer in stock

Which tool can clearly confirm that the problem is indeed caused by the inventory check?

- A. Sales Dashboard from Reports and Dashboards
- B. Service Status from Business Manager
- C. Pipeline Profiler from Business Manager
- D. Realtime Report from Reports and Dashboards

Correct Answer: B

QUESTION 2

During code review, the Architect found that there is a service call on every visit of the product detail page (PDP).

What best practices should the Architect ensure are followed for the service configuration? Choose 2 answers

- A. Circuit breaker is enabled.
- B. Service timeout is set.
- C. Service mock up call is configured.
- D. Service logging is disabled.

Correct Answer: AB

QUESTION 3

An integration cartridge implements communication between the B2C Commerce Storefront and a third-party service provider. The cartridge contains the localServiceRegistry code:

```
var LocalServiceRegistry = require('dw/svc/LocalServiceRegistry');
module.exports = LocalServiceRegistry.createService('serviceprovider.rest.auth',
  {
    createRequest: function(svc) {
      var svcCredential = svc.getConfiguration().credential;
      if (empty(svcCredential.user) || empty(svcCredential.password)) {
        throw new Error('Basic Auth requires valid client ID (user) and secret (password)');
      }
      var requestBody = {
        clientId: svcCredential.user,
        clientSecret: svcCredential.password
      };
      svc.setAuthentication('NONE');
      svc.addHeader('Accept', 'application/json');

      return JSON.stringify(requestBody);
    },
    parseResponse: function(svc, httpClient) {
      return httpClient.text;
    }
  }
);
```

How does this code sample accomplish authentication to the service provider?

- A. By Issuing a Basic Auth request to the service provider.
- B. By performing a signed SOAP Auth request using a certificate.
- C. By wrapping the authentication service call with Basic Auth.
- D. By disabling Basic Auth and executing the service authentication call.

Correct Answer: D

QUESTION 4

A Client has automated builds that deploy the code; however, recent builds started failing with compilation issues, which are not reproducible in developer's environment. What first step needs to be taken to identify and fix the issue?

- A. Clean up build server work space and run job again.
- B. Verify the modules versions used to generate the code.
- C. Verify the generated JavaScript and CSS for the build.
- D. Recreate the job in the build server to verify compilation issues.

Correct Answer: B

QUESTION 5

client uses an external marketing tool to manage promotions and coupons for its multiple brands. They currently have only one brand on B2C Commerce and they get Import-ready feeds created by this tool on an SFTP location.

The marketing team completes the data preparation by the end of the work day.

How should the Architect handle this import?

- A. Create a Job and define three steps: one step uses ExecuteScriptModule to download the files from SFTP, and two standard steps to Import the promotion and coupons.
- B. Create a Job and define three steps: one standard step to download files from sftp and two steps that use Execute Script Module to import the promotion and coupons.
- C. Create a job and define three steps: one custom step to download the files from SFTP, and two standard steps to import the promotion and coupons.
- D. Create a Job and define three custom steps: download the files from SFTP, import promotions, import coupons

Correct Answer: C
