QUESTION 1

Given the SFRA Controller below:

```
01 var server = require('server');
02 var cache = require('*/*cartridge/scripts/middleware/cache');
03
04 server.get('Show', cache.applyDefaultCache, function (req, res, next) {
05     viewData = {name: 'my string'};
06     res.render('/pages/mypage', viewData);
07     next();
08 });
09
10 module.exports = server.exports();
```

Why would a JavaScript debugger, that is stopped at line 06, fail to show the viewData variable in the inspection tool?

- A. viewData is declared but not assigned
- B. viewData is assigned but not declared
- C. viewData is a B2C Script reserved name
- D. cache.applyDefaultCache is not a valid middleware

Correct Answer: B

QUESTION 2

A developer is given the requirement to add a step to the existing business logic of the registration process. How should the developer modify the route that handles the customer registration?

- A. Copy the code from the original route to a new controller route, and change it.
- B. Override the route with new functionality.
- C. Extend the route with new functionality.
- D. Change the controller route with new functionality.

Correct Answer: A

QUESTION 3

An instance has custom logging enabled. The log reaches the file size limit. What happens in this situation?

- A. The current log file is archived and a new log file is created
- B. The log file is deleted and a new log file is created

- C. Logging is suspended for the day
- D. The log file rolls over and the oldest log messages are overwritten

Correct Answer: C

QUESTION 4

Universal Containers created a site export file from staging in the global export directory. How should the Digital Developer update their sandbox using this staging site export file?

- A. Perform a data replication from staging.
- B. Use the Site Development > Site Import and Export Business Manager module.
- C. Download the site export file and use UX Studio to transfer the data to the sandbox.
- D. Use the Site Development > Import and Export Business Manager module.

Correct Answer: B

QUESTION 5

Refer to this example snippet of an ISML template:

Welcome back, `${pdict.username}`.

The "pdict.username" variable does not print correctly when used in a similar template.

Assuming that the variable is correct in the Controller's "viewData", how should a developer temporarily modify their code to use a debugger and troubleshoot the issue in the template?

- A. Add an tag to have the debugger stop at the desired line.
- B. Add an tag and JavaScript with a breakpoint set.
- C. Add a local tag to inspect the topLevel function in the call stack.
- D. Add an tag to allow the inspection of global variables.

Correct Answer: C
