QUESTION 3

Someone is training a machine learning system to perform classification of unstructured content. What is the purpose of a validation data set on the training process?

- A. Validation data sets are used to fine tune the accuracy of the training model
- B. Validation data sets are only used if test data is unavailable
- C. Validation data sets are exactly the same as test data sets and are used to test the limits of the machine learning model
- D. Validation data sets would never be used in a classification system as only training and test data are required

Correct Answer: C

QUESTION 4

An AI FAQ widget on a company's support portal allows users to ask questions related to the company and its products.

Why is it important to analyze the user's input for entities?

- A. Specific content such as the location (Colorado) could be used to further inform the program.
- B. There must be an intent for each and every entity detected by the program.
- C. The number of entities found in the utterance could improve the accuracy of the answer.
- D. They could indicate variations in the flow of the dialog node.

Correct Answer: A

QUESTION 5

What are examples of the information the IBM Watson Natural Language Understanding service extract from html, or web-based content when it analyzes entities?

- A. text and title information
- B. people, companies, organizations
- C. subject-action-object relations
- D. topic keywords

Correct Answer: C
