### QUESTION 1

Where can business process users start manual unstructured (Adhoc) activities that are not hidden?

- A. Work details page in Process Portal
- B. Launch details page in Process Portal
- C. Process Instance details page in Process Portal
- D. Process Performance details page in Process Portal

Correct Answer: C

---

### QUESTION 2

A shared object is passed by reference from a process to two different services. The process and services each contain a separate copy of the business object. When the first service completes, the shared object values are automatically persisted to the data store.

Which statement is true regarding the second service?

- A. When the second service starts, the shared object values are automatically loaded from the data store.
- B. When the second service starts, the shared object values still refers to the copy of the business object it received from the process.
- C. When the second service starts, the shared object values have to be manually loaded from the data store.
- D. When the second service starts, the shared object values is passed by the process again.

Correct Answer: D

---

### QUESTION 3

How can performance data be tracked across processes?

- A. Create and configure tracking groups.
- B. Enable autotracking on each activity of the process.
- C. Put all tracked activities in swimlanes mapped to the same team.
- D. Activate all snapshots which contain desired autotracked variables.

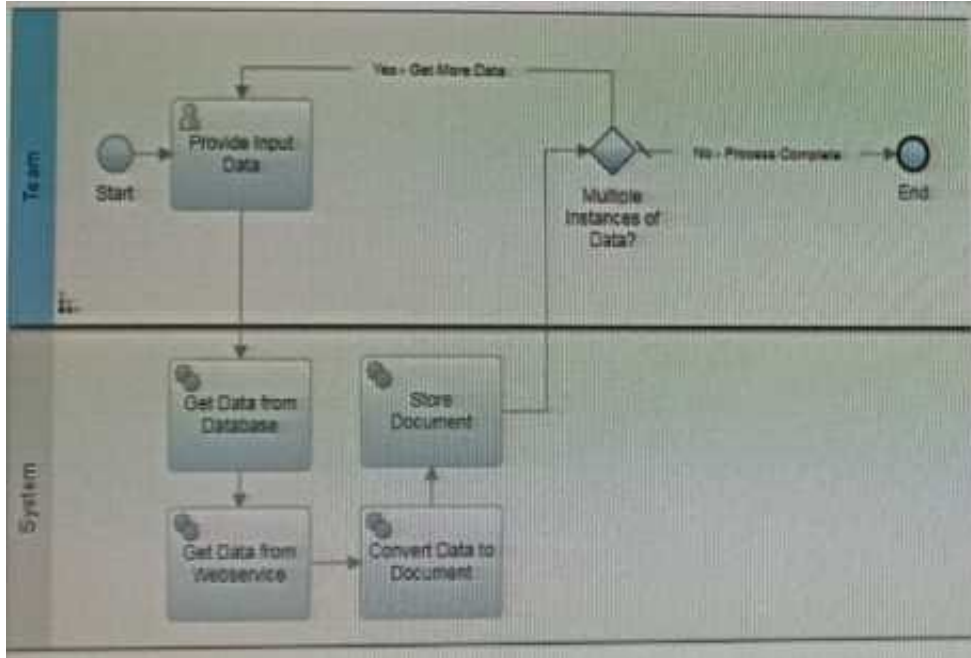

Correct Answer: B

---

#### QUESTION 4

The process model below shows a development practice that is inefficient and may cause performance issues in an IBM BPM application when a high volume of process instances are executed at the same time. Which inefficient development practice is modeled below?

- A. Not clearing variables in exposed human services
- B. Requiring user intervention in each loop iteration
- C. Using sequential system lane activities inefficiently
- D. Using multi-instance loops in system lane or batch activities

Correct Answer: A

#### QUESTION 5

What will happen when sequence flows evaluate to false in an inclusive gateway?

- A. The instance will never complete.
- B. The default sequence flow will be followed.
- C. A failed event will be created for the process instance.
- D. The gateway will wait for one of the sequence flows to become true.

Correct Answer: B
