QUESTION 1

A loan application process has several activities. A developer noticed a Service Flow activity in that

process is taking a long time to complete. That particular Service Flow implementation has a Linked

Service Flow activity and few other activities in it.

What can the developer do to improve the performance of the Service Flow?

A. Enable caching of results for the top level Service Flow.

B. Attach a timer boundary event to the top level Service Flow.

C. Add tracking events before and after the top level Service Flow.

D. Assign pre-execution and post-execution scripts for the top level Service Flow.

Correct Answer: A

QUESTION 2

Which team is eligible for being invited to collaborate with other users on a task?

A. Admin team

B. Support team

C. Experienced team

D. Task experts team

Correct Answer: A

QUESTION 3

Which statement describes using a Service Call control from the BPM Ul toolkit to invoke a service flow?

A. It is used to invoke a service without having to use boundary events and has an input and output variable with on load, on invoked, on result, on error events. It can be placed in client side human service coach page or inside coach view.

B. A Service flow which has an input and output variable and a service task activity inside it calling an implementation service.

C. It is used to invoke a service that returns the data displayed in the table, never bound to variable, with on load, on service data loaded, on service data error events. It can be placed in client side human service coach page or inside coach view.

D. It is coupled with the human service in which it is used. It is created in the library area where User Interface library items are stored.

Correct Answer: B

QUESTION 4

What is a valid logging command to print log statements to the client-side browser?

A. print.log(`\\'info")

B. debug.log("info\\'\\')

C. client.log(`\\'infon\\'\\')

D. console.log(`\\'info")

Correct Answer: D

QUESTION 5

For data mapping in nested client-side human services, what type of objects are passed by reference?

A. All object types

B. String type object

C. Boolean type object

D. Complex business objects

Correct Answer: D
