QUESTION 1

When referencing a policy within a node configuration, what is the format of the reference?

- A. {PolicyProjectName}:PolicyName
- B. PolicyProjectName:PolicyName
- C. Policy:{PolicyName}
- D. ApplicationName:PolicyName

Correct Answer: D

QUESTION 2

DRAG DROP

What is the correct order of steps to create an Integration Service from scratch?

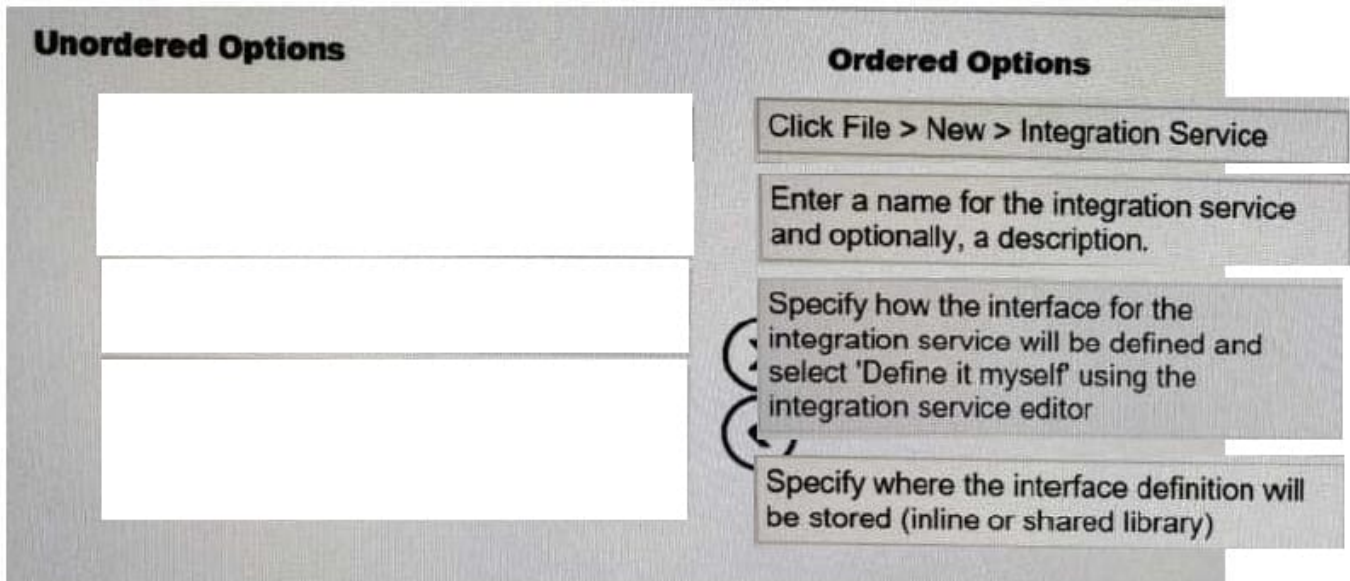

Select and Place:

Unordered Options

- Click File > New > Integration Service
- Enter a name for the integration service and optionally, a description.
- Specify where the interface definition will be stored (inline or shared library)
- Specify how the interface for the integration service will be defined and select 'Define it myself' using the integration service editor

Ordered Options

Correct Answer:

To create an integration service by defining a new interface, complete the following steps:

Procedure

- Open the New Integration Service wizard by using one of the following methods:
- Click File > New > Integration Service.
- In the Application Development view, click New > Start by creating an integration service.
- Right-click the white space of the Application Development view then click New > Integration Service.
- Enter a name for the integration service, and optionally a description.
- To specify how you want to define the interface for your integration service, select Define it myself using the integration service editor.
- Specify where you want to store your interface definition.
- If the definition will be used by this integration service only, store the definition in the integration service project.
- If the definition might be used by multiple integration services, store the definition in a shared library.

QUESTION 3

Which editor are the global cache values defined and retrieved from?

- A. Graphical Data Mapping
- B. Message Flow Mapping
- C. Integration Data Mapping
- D. Message Data Mapping

Correct Answer: A

https://www.ibm.com/support/knowledgecenter/SSMKHH_10.0.0/com.ibm.etools.mft.doc/br26106_.htm

QUESTION 4

What is the purpose of an Integration Node?

- A. It is a parent process which is responsible for looking after one or more associated runtime processes.
- B. It is a collection of processes to manage state of the deployed applications and libraries.
- C. It provides a specific mode of operation or the availability of an additional product, such as a database.
- D. It provides an isolated runtime environment for a set of deployed message flows and resources.

Correct Answer: D

QUESTION 5

When splitting message flow processing between different integration servers how do the flows communicate?

- A. Using a switch server and connectivity agents
- B. Using switch addresses and node configuration
- C. Using a connectivity server and switch agents
- D. Using node addresses and node configuration

Correct Answer: A

If you are splitting processing between different integration servers, or between IBM App Connect Enterprise and IBM App Connect on IBM Cloud, your flows communicate by using a Switch server and connectivity agents.
