QUESTION 1

In a Data Module a developer creates a joined view from two tables (a and b) and then joins this to another table (c). What would be the execution logic in the database?

- A. All queries are collapsed and a standard join across all three tables (a, b, c) is performed.
- B. The columns used in table (c) are joined on the key to table (b) first and then the results are post-joined to table (a).
- C. It makes no difference to the execution as a joined view is only used to group data items in a logical manner to help the business user find their data.
- D. The joined view (a and b) is evaluated and all results are then post-joined to the other table (c).
