QUESTION 1

A company defined a strategic goal to move applications to cloud. In this context, all new projects developed must be cloud-native. A developer starting a new project should follow which strategy?

- A. The application must use PaaS in public clouds and be portable among them
- B. The application must be scalable and run in a dynamic environment
- C. The application must be stateless and use serverless architecture
- D. The application must use a CORBA buffer to integrate APIs

Correct Answer: D

QUESTION 2

The application team has made extensive use of IBM Certificate Manager for their work. What additional service would provide an alert in advance that a certificate was going to expire?

- A. LogDNA
- B. SysDig
- C. Availability Monitoring
- D. Security Advisor

Correct Answer: A

QUESTION 3

A developer has been granted the Viewer role for the IBM Log Analysis with LogDNA Web UI and view logs. Which of the following actions will the user be able to achieve?

- A. Launch the Web UI and view logs in the Web UI
- B. View the list of service instances in the Observability Logging dashboard
- C. View service keys through the Web UI
- D. Review IAM permissions granted to other users

Correct Answer: B

QUESTION 4

In the Kubernetes architecture, what is the most granular unit of deployment?

- A. Replica
- B. Service
- C. Pod
- D. Container

Correct Answer: C

QUESTION 5

How can a container image with a known but otherwise mitigated security issue detected by the Vulnerability Advisor be provisioned onto an IBM Cloud Kubernetes Service?

- A. Edit the default policies of the Container Image Security Enforcement feature to allow the image to be deployed
- B. Edit the Kube-system ImagePolicy in IBM Cloud
- C. Create a ClusterImagePolicy object and apply to the cluster
- D. Permit image repositories by using IBM-system policy

Correct Answer: D
