QUESTION 4

An administrator want to create a time based escalation point to evaluate to 30 days in the future.

What is the correct value to use in the Elapsed Time Interval field along with the Elapsed Time Attribute?

- A. Today + 30
- B. Sysdate + 30
- C. +30 (positive 30)
- D. -30 (negative 30)

Correct Answer: C

QUESTION 5

A company orders and receives a case containing 36 light bulbs which are issued one at a time. What is created for this relationship?

- A. Multiplier
- B. Issue Unit
- C. Issue Type
- D. Conversion

Correct Answer: B

You order light bulbs in bulk and the unit of measure is a case, with a quantity received of 36. However, when you issue the item, you issue it one at a time. In this case, you can define a measure unit of CASE and another measure unit of EACH. You define a conversion ratio from CASE to EACH with a factor of 36. When you receive an order of bulbs into a storeroom, the received order unit of one CASE is converted into the storeroom issue unit of 36 EACH.
