-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

Which cloud attribute describes the ability to quickly adapt to high volatility in the amount of requests?

- A. Elasticity
- B. High Availability
- C. Service Delivery
- D. Service Level Agreement Compliance

Correct Answer: D

QUESTION 2

What is a typical grid computing usage scenario?

- A. Users get root access to remote instances and install and deploy their own applications configuring the environment for executing MPI applications.
- B. Users run applications on a computing infrastructure comprised by a collection of homogeneous nodes that share I/O facilities, operating system processes, and appear as single system.
- C. Developers build applications that require a large number of computing resources beyond the size of the local department computing facilities and submit the application for execution to internet scale computing infrastructures.
- D. Developers have a limited amount of investments for running their web applications and decide to leverage Computing as a Service solutions to increase their investments in computer resources as their applications become more popular.

Correct Answer: B

QUESTION 3

Which statement is true about Bluetooth and WiFi in a cloud computing environment?

- A. They always use two-factor authentication.
- B. Their utilization is not compliant with main safe requisites.
- C. They require automatic locking if the device is idle for a certain period of time
- D. Devices can be easily exploited to infect a mobile device with malware or compromise transmitted data.

Correct Answer: C

QUESTION 4

What can be done to make maximum use of the cloud computing interoperability principle?

- A. Use standard protocols.
- B. Use hardware and software of a single vendor.
- C. Use the integration between OpenStack and CloudStack.
- D. Employ multiple system integrators to build a private cloud.

Correct Answer: A

QUESTION 5

What is Software Defined Network (SDN) in reference to cloud computing?

- A. SDN are security standards that increase environment performance.
- B. SDN disables group conflict resolution if the environment is configured for replication.
- C. SDN provides a breakdown, by time, of the quantity and distribution of the unbind transactions found within the audit log.
- D. SDN is the framework to automatically manage and control a large number of network devices and services in a multi-tenant environment.

Correct Answer: D
