Which methods does a developer have access to when interfacing with the IBM WebSphere Portal user repository? (Choose two.)

A. PUMA SPI objects

B. PUMA EJB access

C. PUMA REST service

D. WebSphere Portal user servlet

E. WebSphere Application Server secure ACL API

Correct Answer: AC

QUESTION 5

Which method can be used only in an ActionResponse?

A. encodeURL

B. setProperty

C. addProperty

D. setPortletMode

Correct Answer: A

Corresponding to the requests, there are the PortletResponse, ActionResponse and RenderResponse interfaces.

The encodeURL() method of PortletResponse is used to encode URLs used to access other resources within the application, such as servlets, images and static files. The container will add in any addition state information that is required.

The ActionResponse response is used by processAction(). This method can send a redirect, change the portlet mode, change the window state, and set parameters which will be included in subsequent render requests.
