QUESTION 1

Using the Administration Console for Content Platform Engine, a P8 administrator may need to enable the P8 tracing subsystem component logging to gather additional details.

When enabling the subsystems "Database", "EJB" and "Search", what is the default name of the file that is the debug information will be output to?

A. p8svr.trace.out

B. p8_server_out.log

C. p8_server_error.log

D. p8_server_trace.log

Correct Answer: C

QUESTION 2

An IBM Content Platform Engine V5.2.1 (CPE) administrator receives a call from a user that the system is running slow during certain times of the day.

What logging or configuration change in CPE, on a WebSphere Application Server (WAS), will help gather information for this issue?

A. In FileNet Enterprise Manager under the Domain Properties>Trace Control tab check the Enabled Trace Logging box.

B. For CPE installed on a WAS, modify the fnlog4j.properties.sample and place it in WebSphere \AppServer\java\jre\lib.

C. In Administration Console for Content Platform Engine under the Domain Properties>Trace Subsystem check the Enabled Trace Logging box.

D. For CPE installed on WebSphere, edit the perflog_config.properties file under WebSphere\AppServer \profiles\profile_name\FileNet\server_instance_name.

Correct Answer: B

QUESTION 3

Users in a legal department are unable to perform a content based search successfully. The administrator checks the document classes in Administration Console for Content Engine and confirms that they are CBR enabled. During the administrator\\'s troubleshooting it is discovered that the index is corrupt. The administrator reviews remediation steps, such as reindexing, to fix the corrupt full-text index.

What else can the administrator to do help identify document-related index failures?

A. Review the UNRECOGNIZED_EXTRACTION log for the index errors.

B. Set the "Text Extracted" property on the document class that is going to be indexed.

C. Select "Propagate" to source in the Indexing failures recording level on the object store.

D. Use the IBM Content Services command-line administration tool to help identify failures.

Correct Answer: C

QUESTION 4

The administrators for a large manufacturing organization are planning the installation of IBM\\'s FileNet Content Manager V5.2.1 in an environment where Microsoft SQL will be the hosting database platform. Along with the Content Manager system, there is a legacy IBM FileNet Image Services V4.2 system that they would like to serve as a repository via content Federated Services-Image Services (CFS-IS). They are currently in the planning and MSSQL installation phase.

What database collation settings must they choose?

A. Binary-code point sort order. Case sensitive, for use with 1252 Character Set.

B. Dictionary order, case sensitive, for use with 1252 Character Set (or any case-sensitive SQL Server collation).

C. Dictionary order, case-intensive, for use with 1252 Character Set (or any case-intensive SQL Server collation)

D. Dictionary order, case-intensive, accent-intensive, kana-intensive, width-sensitive (or any case-intensive SQL Server collation).

Correct Answer: C

QUESTION 5

A software vendor is implementing the IBM Content Management Interoperability Services (CMIS) for IBM FileNet Content Manager.

The administrator will set which two of the following for this configuration?

A. IBM CMIS supports only Federated Repositories.

B. IBM CMIS and FileNet Content Engine can have the same LDAP server.

C. The IBM FileNet P8 and IBM CMIS Platform uses LDAP-based security and also supports Java 2 security.

D. Use the IBM WebSphere Application Server administrative console for the Content Engine server to ensure that the following settings match on both (CMIS and P8 Content Engine) application servers. 1) User filter 2) Group Filter 3) User ID map 4) Group member ID map 5) Certificate map mode 6) Certificate filter

E. Use the IBM WebSphere Application Server administrative console for the Content Engine server to ensure that only the following settings match on both CMIS and FileNet Content Engine application servers.

1) Primary administrative user name.

2) Automatically generated server identity.

Correct Answer: D
