- ⚙ **800,000+** Satisfied Customers

### QUESTION 1

Which two features are the motivation behind the conversion to extended RBA/LRSN format?

- A. Greater RECOVER utility concurrency.
- B. Reduction of the potential for an RBA rollover.
- C. More precise PIT recovery of the DB2 system catalog and directory.
- D. Potentially faster UPDATE performance due to greater LRSN granularity.
- E. Reduced p-Lock contention in the coupling facility due to greater LRSN granularity.

Correct Answer: C

---

### QUESTION 2

Having to deal with data inconsistency during a disaster recovery can significantly impact the length of time needed to recover. One of the actions that could be taken to prevent this from occurring is to not take an image copy of a data set that contains inconsistent data.

Which two options can be used to help prevent taking an image copy of inconsistent data?

- A. Run the DIAGNOSE utility before making an image copy.
- B. Run the CHECK DATA utility before making an image copy.
- C. Use the CHECKPAGE option when running the COPY utility.
- D. Prior to making an image copy, run DSN1 COPY with the CHECK option.
- E. At install time, use the DSNTIJIC install job to take a full image copy of the DB2 catalog and directory.

Correct Answer: CD

---

### QUESTION 3

What job will check for changes to DB2 that might impact your migration to Version 11 conversion mode?

- A. DSNTIJIC
- B. DSNTIJXA
- C. DSNTIJTC
- D. DSNTIJPM

Correct Answer: C

---

#### QUESTION 4

Which action should you take to improve the performance of authorization checking for stored procedures or user-defined functions?

- A. Set subsystem parameter EXTSEC to YES.
- B. Increase the value of subsystem parameter SECQTY.
- C. Increase the value of subsystem parameter AUTHCACH.
- D. Increase the value of subsystem parameter CACHERAC.

Correct Answer: D

---

#### QUESTION 5

You execute the following SQL against the CDB (Communications Database) of your DB2 subsystem:

```
INSERT INTO SYSIBM.IPNAMES
```

```
(UNKNAM.SECURITY_OUT.USERNAMES,IBMREQD.IPADDR) VALUES (\\'REMOTEDB\\'. \\'P\\' \\'O\\'. \\'N\\',  
*123.34.45.56\\');
```

```
INSERT INTO SYSIBM.IPLIST (LINKNAMEJPADDRJBMREQD) VALUES (\\'REMOTEDB\\', \\'123.34.45.56\\',  
*N\\');
```

```
INSERT INTO SYSIBM.IPLIST (LINKNAMEJPADDRJBMREQD) VALUES C REMOTEDB\\', \\'123.34.45.57\\',  
\\'N\\');
```

```
INSERT INTO SYSIBM.USERNAMES
```

```
(TYPE,AUTHID.LINKNAME,NEWAUTHID.PASSWORD,IBMREQD) VALUES (T, \\'USER1\\'.
```

```
\\'USER2\\' ", ,PWD2,1 *N\\');
```

```
INSERT INTO SYSIBM.USERNAMES
```

```
(TYPE,AUTHID.LINKNAME,NEWAUTHID.PASSWORDJBMREQD) VALUES (\\'O\\', \\'USER1\\'. \\'USER3\\', *\\',  
\\'PWD3\\', \\'N\\');
```

There is no trusted connection to REMOTEDB. USER1 issues a query addressing remote data source REMOTEDB on your DB2 subsystem.

Which authorization id will be used on the remote data source REMOTEDB?

- A. USER1
- B. USER2

C. USER3

D. USER4

Correct Answer: A
