QUESTION 1

Why would the SHA1 of an action downloaded on the agent need to be checked?

- A. to troubleshoot why an action failed to be run by an agent
- B. to troubleshoot why the agent service has stopped running
- C. to troubleshoot if the pre-cache setting was successfully turned on
- D. to troubleshoot whether FIPS mode was turned on during the deployment

Correct Answer: A

QUESTION 2

Which statement best describes the bufferdir used by the BES FillDB service on the IBM Tivoli Endpoint Manager (TEM) Server?

- A. It should always be empty in a healthy environment.
- B. It is used to store downloaded files from the Internet used by Actions.
- C. It may take several minutes for the files to be consumed in a large and active environment.
- D. It is used to populate the Fixlet details collected from external sites into the TEM database.

Correct Answer: C

QUESTION 3

What is the difference between a Manual Group and an Ad-Hoc Group?

- A. Ad-Hoc is persistent and Manual is temporary.
- B. Ad-Hoc is temporary and Manual is persistent.
- C. There is no difference, they are both persistent.
- D. There is no difference, they are both temporary.

Correct Answer: B

QUESTION 4

How are security patches, hot fixes, and service packs packaged with IBM Tivoli Endpoint Manager V8.1 (TEM)?

- A. Use the TEM Fixlet Editor to embed patches in a Fixlet.

- B. Acquire TEM compatible packages directly from software vendors
- C. Use the Software Package Editor of IBM Tivoli Configuration Manager to create one package per patch.
- D. IBM researches software vendor patch information and provides Fixlets that will be used to check for compliance and apply remediation if required.

Correct Answer: D

QUESTION 5

Where are patches evaluated for compliance in an IBM Tivoli Endpoint Manager V8.1 (TEM) environment?

- A. On the TEM Relays driven by the relevance language.
- B. Centrally by the TEM Server using change management information.
- C. Centrally by the TEM Server using information stored in the relational database.
- D. Directly on the endpoint by the TEM Agent using Fixlets driven by the relevance language.

Correct Answer: D
