QUESTION 1

Which is a valid option for load balancing requests across report servers?

- A. Configure dedicated web servers.
- B. Rely on automatic load balancing weighted round robin.
- C. Configure dispatchers together with the gateway.
- D. Configure load balancing to cluster compatible.

Correct Answer: B

QUESTION 2

Below is a partial diagram of the processing that occurs when a user submits a request for authentication through the log on page in their browser.

Which of the following components represents X?

- A. Content store
- B. IBM Cognos Access Manager
- C. Query database
- D. Authentication provider database

Correct Answer: B

QUESTION 3

Which of the following is true regarding the IBM Cognos BI gateway?

- A. The gateway can be configured to send requests directly to the Content Manager.
- B. For failover, the gateway can be configured to know the location of multiple dispatchers.
- C. When more than one dispatcher is available, the gateway can automatically balance the load of requests by sending them to any dispatcher.
- D. If the gateway is installed on a machine that is separate from where other IBM Cognos BI components are installed, the services for the gateway must be started first.

Correct Answer: B

QUESTION 4

There is a load balancing infrastructure set up in a IBM Cognos BI environment. In order to disable the IBM Cognos BI internal load balancing mechanism, what value must be selected for the Load Balancing Mode setting?

- A. Custom balancing
- B. Cluster compatible
- C. Weighted roundrobin
- D. Server-side processing

Correct Answer: C
