QUESTION 1

An administrator has set up drill-through access in a package to run the target Query Studio report. By default, what happens when a user clicks the drill-through link?

- A. The report runs in IBM Cognos Viewer.
- B. The most recent report output is shown.
- C. The report runs and opens for editing in Query Studio.
- D. The user is prompted to run or edit the report.

Correct Answer: C

QUESTION 2

An administrator creates a shortcut that points to an invoice report. What happens if the invoice report is renamed?

- A. The shortcut contains the original name and can be used to view the latest output before the report was renamed.
- B. The shortcut contains the original name and no longer works because the link to the report is broken.
- C. IBM Cognos Connection automatically updates the report name in the shortcut, and the shortcut remains fully functional.
- D. IBM Cognos Connection automatically deletes the shortcut.

Correct Answer: B

QUESTION 3

What is true about servlets and services?

- A. The Content Manager and dispatcher servlets run within the Java servlet container configured for IBM Cognos BI.
- B. If a service fails, users get email notification.
- C. The report service and batch report service run within the Java servlet container.
- D. The report service and batch report service are Java-based applications.

Correct Answer: A

QUESTION 4

The Report Upgrade task in IBM Cognos Connection provides options for upgrading report specifications. Which of the following is one option?
