QUESTION 1

Which of the following statements about Multi-Select Lists are correct?

- A. Domains that use multi-select lists must be specified within the MULTIPLE_SELECT section of the Application.prx file.
- B. The property specified for the TARGET element must have a Domain Definition that ultimately unwinds to the String type because multiple user selections will be concatenated into a tab-delimited string.
- C. The INITIAL element used should declare a MULTI-SELECT attribute with the value true.
- D. If a SOURCE element is used within the MULTI_SELECT definition to pre-select items in the list, the Server Interface property it refers to should contain a tab-delimited string.

Correct Answer: B

QUESTION 2

Which of the following statements about aggregation in Cúram are correct? Which of the following statements about aggregation in Cúram are correct?

- A. An entity may aggregate another entity.
- B. A struct may aggregate an entity.
- C. A struct may aggregate another struct.
- D. An entity may aggregate a struct.

Correct Answer: BC

QUESTION 3

Which two of the following statements about VIM files are true? [Select 2]

- A. They contain common fragments of UIM pages for reuse
- B. They require corresponding properties files
- C. They can contain any of the UIM elements supported by a UIM file
- D. They must contain a PAGE_ID element

Correct Answer: AB

QUESTION 4

The variable project.package stores the root name of a Cúram application, for example,

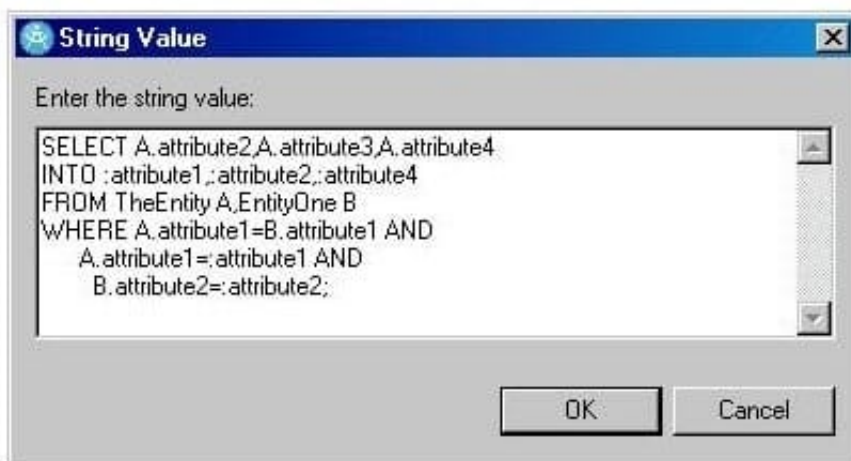

project.package=serverworkshop. The variable project.package stores the root name of a Cúram application, for example, project.package=serverworkshop. This variable is stored in which file?

- A. curam-config.xml
- B. Application.prx
- C. Bootstrap.properties
- D. datamanager_config.xml
- E. Curam.properties

Correct Answer: B

QUESTION 5

Consider the following hand-crafted SQL statement (written for an entity operation) and the relevant modeled information presented: Which of the following statements are valid?

A. A build generated will fail with the error message '\\Error 20500 - incorrect SQL syntax defined for nonstandard operation on [Entity].[Operation]\\\\'.

B. It will only be possible to test whether the syntax is well-formed by running the SQL.

C. A build generated will complete successfully, but the entity operation may throw an exception at runtime.

D. The use of Host variables `\\':attribute1\\'` and `\\':attribute2\\'` as both argument and return variables will cause a compilation error in the server application.

Correct Answer: BC
