### QUESTION 1

In a current implementation of Sterling Order Management, there is a business requirement to:

1. print item labels with barcodes for item IDs 2. generate and print Operational Reports for the Order Processing. Which two of the following are supported by Sterling Order Management to meet this requirement?

- A. Jasper Reports
- B. Crystal Reports
- C. Loftware Reports
- D. IBM Cognos Reports
- E. GNU Enterprise Reports

Correct Answer: AD

---

### QUESTION 2

A business loads catalog data into Sterling and wishes to make use of the Real-Time Availability Monitor (RTAM). To do so, the business needs to define and associate Available To Promise (ATP) monitoring rules in Sterling. Different "types" of items have common monitoring threshold requirements. For example, all electronics have same desired thresholds. How should this be modeled in Sterling to MINIMIZE maintenance and customization?

- A. Use manage Item API to update ATP rule value for each individual item.
- B. Look up item classification, use manage InventoryMonitorRule and publish availability as appropriate.
- C. Define the appropriate ATP rules in Sterling and then pass the appropriate values when triggering the RTAM on Sterling.
- D. Define classification hierarchy and assign to "Inherited Item Attributes" usage, and then assign an ATP rule to each "type" of item such that it is inherited by all items of that type.

Correct Answer: D

---

### QUESTION 3

An enterprise dealing with electronic appliances fulfills customer orders using Sterling Order Management. The enterprise uses multiple distribution centers to ship the orders. Due to the size and weight of the items, a shipment can be shipped in multiple boxes. The enterprise would like to provide tracking information of the boxes to its end customer, and would also like to bill the customer only once per shipment. Which of the following options will be a good way of modeling this requirement?

- A. The various boxes and the associated tracking number can be modeled as containers within a shipment. Shipment level invoice can be raised to ensure the customer is invoiced only once per shipment.
- B. The various boxes and the associated tracking number can be modeled as a hang-off table to YFS\_SHIPMENT. Shipment level invoice can be raised to ensure the customer is invoiced only once per shipment.

C. Since the carriers treat each box as a separate shipment, the various boxes and the associated tracking number should be modeled as individual shipments. Order line level invoicing can be used to invoice the customer once per shipment.

D. Since the carriers treat each box as a separate shipment, the various boxes and the associated tracking number should be modeled as individual shipments. Deliver Shipment transaction can be used to group shipments delivered to the customer create a single invoice.

Correct Answer: A

---

#### QUESTION 4

In the current IBM Sterling Selling and Fulfillment implementation, there are new tables defined by the implementation team that contain configuration data, and this data needs to be migrated across many environments. In order to migrate the data using the Configuration Deployment Tool (CDT), a solution designer should add the new table list in which of the following files?

- A. \$INSTALL\_DIR/resources/ydkresources/ydkprefs.xml
- B. \$INSTALL\_DIR/properties/customer\_overrides.properties
- C. \$INSTALL\_DIR/resources/ydkresources/cdt\_custom.xml
- D. \$INSTALL\_DIR/resources/ydkresources/cdt\_dbdefaults.properties

Correct Answer: C

---

#### QUESTION 5

A customer pays for an order using a Credit Card and a Gift Card. The business requirement is to authorize Credit Cards, charge any Gift Cards presented, and provide an immediate response to the customer. Which of the following APIs can be used to implement this?

- A. requestCollection
- B. executeCollection
- C. processOrderCollection
- D. processOrderPayments

Correct Answer: D
