QUESTION 1

In an FTP pull scenario with many trading partners, if the expected file is not available at the external FTP Server, the Business Process (BP) should reconnect and check for the file again after about 15 - 30 minutes. Which service would provide the optimal performance for the timing logic?

A. Wait service

B. Sleep service

C. Schedule service

D. FTP Client Begin Adapter

Correct Answer: A

QUESTION 2

The security administrator configures a user to be authenticated with a LDAP server instead of the IBM Sterling B2B Integrator (SBI) user database. Where is the LDAP Host configured?

A. in the ui.properties file

B. in the security.properties file

C. in the authentication_policy.properties file

D. in the SBI dashboard under Operations > LDAP Servers

Correct Answer: C

QUESTION 3

A customer has moved the IBM Sterling B2B Integrator (SBI) database server to a new ipaddress/ hostname and needs to make the changes to SBI so that it can connect to the new server. Which procedures should be followed?

A. Edit /properties/sandbox.cfg and change all old database ipaddress/hostname to the new one, save and run setupfiles.sh.

B. Edit /properties/jdbc.properties.in and change all old database ipaddress/hostname to the new one, save and run setupfiles.sh.

C. Edit /properties/jdbc.properties and change all old database ipaddress/hostname to the new one, save and run setupfiles.sh.

D. Edit /properties/jdbc_customer.properties.in and add all database pools into this file with new ipaddress/hostname, save and runsetupfiles.sh.

Correct Answer: A

QUESTION 4

A developer needs to export all versions of a Business Processes (BP). Which two formats can be selected within Resource Manager for exporting objects from IBM Sterling B2B Integrator (SBI)? (Choose two.)

A. WAR File (.war)

B. Install Bundle (.jar)

C. Text Document (.txt)

D. XML Document (.xml)

E. Compressed file (.zip)

Correct Answer: BD

QUESTION 5

A customer has deployed a two node active-active IBM Sterling B2B Integrator (SBI) cluster in the secure zone on two servers. The customer has installed two servers in the DMZ for the purpose of installing remote SBI Perimeter Servers to facilitate communications with external partners. Each server in the DMZ is multi-homed (two external facing NIC cards with two external IP addresses and one internal facing NIC card) to two different external facing network segments for redundancy in case one network segment fails or a NIC card fails. External partners will connect to an external IP Load Balancer that will distribute inbound FTP/S, SFTP and HTTP Client sessions across the Perimeter Servers. The Perimeter Servers will be installed without using wildcard addresses. The customer requirement is that if any single server fails and oneServers. The Perimeter Servers will be installed without using wildcard addresses. The customer? requirement is that if any single server fails and one of the two external facing network segments fail, all the other SBI nodes and remote Perimeter Server instances must continue to actively handle inbound sessions for each protocol. What is the minimum number of remote Perimeter Server instances that must be deployed in the DMZ?

A. 4

B. 6

C. 8

D. 12

Correct Answer: C
