QUESTION 1

What is the purpose of the command, validate lanfree?

- A. verify the LANFree mount points
- B. verify the target disk storage pools
- C. verify the LANFree storage agent is installed
- D. verify LANFree configuration is working properly

Correct Answer: D

Explanation: VALIDATE LANFREE (Validate LAN-Free paths)

Use this command to determine which destinations for a given node using a specific storage agent are capable of LAN-Free data movement.

Example: Command validate lanfree tiger aix_sta1 Output

```
Node Storage Operation Mgmt Class Destination LAN-Free Name Agent Name Name capable? -----  
----- TIGER AIX_STA1 BACKUP STANDARD OUTPOOL NO No available online paths.  
TIGER AIX_STA1 BACKUP STANDARD PRIMARY NO Destination storage pool is configured for simultan eous write.  
TIGER AIX_STA1 BACKUP STANDARD SHRPOOL YES
```

QUESTION 2

What controls the flow of data from a primary random disk storage pool to a sequential tape storage pool?

- A. migration
- B. expiration
- C. motivation
- D. integration

Correct Answer: B

Explanation: The expiration process frees up storage pools space by marking files for deletion once they have reached a predefined retention period. It also frees the database of entries, which helps manage the size of the database.

QUESTION 3

Once the nightly backups are finished, what is one additional way to protect the files?

- A. run dedupe
- B. expire the database inventory
- C. migrate the primary storage pools to the copy storage pools

D. back up the primary storage pools to the copy storage pools

Correct Answer: D

Explanation: After the initial full backup of your storage pools, incremental storage pool backups are done nightly.

QUESTION 4

Which two statements describe the process of collocation?

A. Placing IBM Tivoli Storage Manager (TSM) database volumes in the same directories.

B. Isolating archive and backup data to separate storage pools.

C. Combining multiple TSM servers onto a single physical server.

D. Isolating a client or group of clients to their own volumes within a storage pool.

E. Isolating a single or group of filespaces to their own volumes within a storage pool.

Correct Answer: DE

Explanation: * When collocation is by client node Volume selection order: 1st: A volume that already contains files from the same client node

* When collocation is by file space Volume selection order: 1st: A volume that already contains files from the same file space of that client node

Note: With collocation enabled, the server attempts to keep files belonging to a group of client nodes, a single client node, or client file space on a minimal number of sequential- access storage volumes. Collocation reduces the number of volume mounts required when users restore, retrieve, or recall a large number of files from the storage pool. Collocation thus reduces the amount of time required for these operations.

QUESTION 5

What does the message ANR***W format indicate?

A. This is a client warning message.

B. This is an informational message.

C. This message was posted Wednesday.

D. This is a Tivoli Storage Manager server warning message

Correct Answer: D

Explanation: Server ANR messages list. Examples:

ANR0107W: Source file(line number): Transaction transaction ID was not committed due to an internal error.

ANR0115W: The server script script name attempted to start more parallel commands than are allowed for a single script. A single script is limited to parallel command limit parallel commands.

ANR0116W: The server script script name attempted to start more parallel commands than are allowed for the server. The server is limited to parallel command limit parallel commands.
