Following Questions and Answers are all new published by IBM Official Exam Center

QUESTION 1

What is granted with client node access privilege?

A. The ability to restore data only.

B. The ability to back up data only.

C. The ability to back up and restore all node data via the web Backup-Archive client only.

D. The ability to back up and restore all node data via the Backup-Archive client command line only.

Correct Answer: C

Explanation: To use the Web Client to back up and restore files on a remote client system, you must have an administrative user ID with client access authority over the node name for the remote client system.

QUESTION 2

Which IBM Tivoli Storage Manager server database backup type can be taken offsite?

A. image database backups

B. database snapshot backups

C. differential database backups

D. high availability database backups

Correct Answer: B

Explanation: Snapshot database backups are typically used for off-site disaster recovery purposes.

Note: When the client backups are complete, the new data in the primary storage pools should be copied to a copy storage pool. The copy storage pool tapes, along with the database backup tapes, should be taken to a secure off-site location or vault. The copy storage pool and database backup tapes are referred to collectively as the off-site backups, and will be used to restore your environment in the event of a catastrophic failure or disaster.

QUESTION 3

Which statement is true about node replication?

A. Only Backup-Archive data can be replicated.

B. Node data can be replicated to multiple targets.

C. Node replication does not support deduplication.

D. Replicated data may be encrypted during transmission.

Correct Answer: C

Explanation: Replication processing involves the interaction between replication rules, states, and modes. Data deduplication and the updating of client node attributes are also factors in node replication processing.

Incorrect: not A: You can replicate the following types of client node data: Active and inactive backup data together, or only active backup data Archive data Data that was migrated to a source replication server by Tivoli Storage Manager for Space Management clients

QUESTION 4

What is the result when the migrate process moves data from a deduplicated pool to a non- deduplicated pool?

A. The migration process fails.

B. The target pool is marked as deduplicated.

C. The data is reconstituted on the target pool.

D. The data in both storage pools is reconstituted.

Correct Answer: B

Explanation: * Data deduplication in Tivoli Storage Manager is a two-phase process. In the first phase, the server identifies the duplicate data in the storage pool. As volumes in the storage pool are filled, data becomes eligible for duplicate identification. A volume does not have to be full before duplicate identification starts. In the second phase, duplicate data is removed by any of the following processes:

Reclaiming volumes in the primary-storage pool, copy-storage pool, or active-data pool Backing up a primary-storage pool to a copy-storage pool that is also set up for deduplication Copying active data in the primary-storage pool to an active-data pool that is also set up for deduplication Migrating data from the primary-storage pool to another primary-storage pool that is also set up for deduplication Moving data from the primary-storage pool to a different primary-storage pool that is also set up for deduplication, moving data within the same copy-storage pool, or moving data within the same active-data pool

QUESTION 5

A node is moved from one domain to another domain. The next day the administrator notices the client has not been backed up. What action must be taken?

A. Reset the client password.

B. Register the node in the domain.

C. Stop and start the client scheduler to find the new domain.

D. Verify that the node has been associated to a schedule in the new domain.

Correct Answer: B

Explanation: REGISTER NODE (Register a Node)

Use this command to register a node to the server.

If a client requires a different policy domain than STANDARD, you must register the client node with this command or

update the registered node.
