-  **800,000+** Satisfied Customers

QUESTION 1

An IBM Spectrum Protect administrator checks the daily client's schedules and sees that one client's scheduled backup was missed. What can cause this issue?

- A. The client scheduler service is not running.
- B. The server dsmserv.opt file is invalid.
- C. The client DSM.opt file is incorrect.
- D. The COMMMETHOD parameter is incorrect.

Correct Answer: C

The client options file is an editable text file that contains configuration information for the backup-archive client. The first time that you start the Windows Backup-Archive Client GUI, the installation program searches for an existing client options file, called dsm.opt. If this file is not detected, a client options file configuration wizard starts and prompts you to specify initial client configuration settings.

QUESTION 2

Which file must be edited to configure Disaster Recovery Manager?

- A. RECOVERY.INSTRUCTIONS.STORAGE
- B. RECOVERY.INSTRUCTIONS.INSTALL
- C. RECOVERY.INSTRUCTIONS.TAPE
- D. RECOVERY.INSTRUCTIONS.PRIMARY

Correct Answer: B

Disaster Recovery Manager configurations include:

RECOVERY.INSTRUCTIONS.INSTALL - for TSM server installation. It contains instructions such as passwords, hardware/software requirements, fix levels, and so on.

QUESTION 3

Which backup function is run on the client so that an incremental backup does not need to query the IBM Spectrum Protect server to determine which files to back up?

- A. Incremental by date backup

- B. Incremental backup
- C. Incremental forever backup
- D. Journal based backup

Correct Answer: A

QUESTION 4

There are two servers, server1 and server2. What is enabled when the command, SET DISSIMILARPOLICIES SERVER2 ON is issued on server1?

- A. It enables the use of more than one server1 policy for management of replicated data on server2.
- B. It enables server1 to manage replicated data on server2.
- C. It enables the policies on server2 to be used for management of replicated data from server1.
- D. It enables exporting policies from server1 to server2 so they can be used for management of replicated data.

Correct Answer: C

Use the SET DISSIMILARPOLICIES command to enable the policies that are defined on the target replication server to manage replicated client-node data. If you do not use the policies on the target

replication server, replicated client-node data is managed by policies on the source replication server.

ON specifies that replicated client-node data is managed by the policies that are defined on the target

replication server.
