QUESTION 1

The use of deduplication processing in deduplication type storage pools requires more of which IBM Spectrum Protect server resource?

- A. IBM Spectrum Protect server memory
- B. IBM Spectrum Protect client memory
- C. TCP/IP bandwidth between the client and the server
- D. IBM Spectrum Protect client sessions

Correct Answer: A

QUESTION 2

Configure IBM Spectrum protect backup-archive client to use journal based backup. The configuration is written to which file?

- A. protect-journalbbd.ini
- B. spectrumprotect-journalbbd.ini
- C. journalbbd.ini
- D. tsmjbbd.ini

Correct Answer: D

On Windows, the journal service configuration file is called tsmjbbd.ini.

QUESTION 3

What is the purpose of running the command PROTECT STGPOOL?

- A. add enhanced security on a directory-container storage pool
- B. encrypt the data in a copy storage pool
- C. store a copy of the directory-container data in another storage pool
- D. write protect tape volumes

Correct Answer: C

PROTECT STGPOOL protects a directory-container storage pool.

Use this command to protect data in a directory-container storage pool by storing a copy of the data in

another storage pool on a replication target server or on the same server by protecting the data to tape.

QUESTION 4

What is the benefit of the RESOURCEUTILIZATION option on the client during a restore?

- A. to increase the number of concurrent restore sessions
- B. to increase the memory usage on the client
- C. to increase the communication buffer from the client to the server
- D. to decrease the memory usage on the client

Correct Answer: A

Use the resourceutilization option in your option file to regulate the level of resources the IBM Spectrum Protec server and client can use during processing.

When you request a restore, the default is to use a maximum of one session.

Additional restore sessions are based on:

resourceutilization value

Etc.

QUESTION 5

Which file is used to add a system-wide client option on an IBM Spectrum Protect client in a Windows environment?

- A. dsmsys.opt
- B. dsm.sys
- C. dsmopt.sys
- D. dsm.opt

Correct Answer: D

Use the SET SUBFILE (Set subfile backup for client nodes) command to set up the server to allow clients to back up subfiles. On the client's workstation, the SUBFILECACHEPATH and SUBFILECACHESIZE options must be specified in the client's options file (dsm.opt). If you are using a Windows client, you must also specify the SUBFILEBACKUP option.
