### QUESTION 1

Which backup-archive client host operating system requires the use of a dsm.sys file?

- A. UNIX/Linux
- B. Microsoft Windows workstation system
- C. any server in a Microsoft Windows cluster
- D. Microsoft Windows server 2008

Correct Answer: A

Configure the IBM Spectrum Protect client

After installing the backup-archive client, you must configure it before performing any operations.

The following applies to AIX, Linux, Solaris, and Mac OS X.

If you are upgrading the backup-archive client, it is unnecessary to reconfigure the scheduler, web client, or other configuration settings. If the dsm.opt and dsm.sys files used by the previous client installation are available in the default installation directory or the directory or file pointed to by the DSM\_CONFIG and DSM\_DIR environment variables, the client accesses these files for configuration information.

### QUESTION 2

There are 6 exit/entry ports in a SCSI library. There are 9 tapes to go offsite. What happens when an administrator issues the following command? `MOVE DRMEDIA * WHERESTATE=MOUNTABLE REMOVE=BULK TOSTATE=VAULT`

- A. IBM Spectrum Protect ejects the 6 tapes then waits for a slot to be made available and ejects the 3 remaining tapes.
- B. IBM Spectrum Protect ejects the 6 tapes and leaves the remaining 3 tapes inside the library to be manually removed.
- C. IBM Spectrum Protect ejects the 6 tapes and then fails the process forcing the administrator to run the process again.
- D. IBM Spectrum Protect ignores the exit/entry ports and leaves the 9 tapes inside the library to be manually removed.

Correct Answer: A

### QUESTION 3

Which statement is true regarding the default management class?

- A. It manager client files when a management class is not otherwise assigned or appropriate.

B. It is the standard management class assigned to IBM Spectrum Protect administrators who require system privileges.

C. It is standard management class assigned to data designated to be exported to another IBM Spectrum Protect server.

D. It is the standard management class node replicated volumes are first assigned to during initial creation.

Correct Answer: A

#### QUESTION 5

On an IBM Spectrum Protect Windows server, a data migration has failed with a tape device error. Which output should be reviewed to get detailed error information?

A. event log

B. dsmerr

C. errpt

D. actlog

Correct Answer: B

dsmerror.log (dsmerr) is the IBM Spectrum Protect client error log.

Incorrect Answers:

A: Note that less detailed error and informational messages are written to the Windows application event log as well.

C: Review error logs for the operating system to find errors that can affect the server. For example, for AIX systems use the errpt command to view errors.

D: The activity log, actlog, contains all messages that are sent to the server console under normal operation
