QUESTION 1

When you run your tests, you notice that the curves are noisy.

How can you correct this and smooth your results?

- A. change the logging level
- B. increase the number of users
- C. reduce the statistical sampling rate
- D. add a synchronization point

Correct Answer: C

QUESTION 2

What is the purpose for correcting time offset?

- A. to synchronize the workbench machine with all the virtual tester agents?machines
- B. to adjust for daylight saving hours on the workbench machine
- C. to ensure that the response time breakdown test reports are correct
- D. to ensure that agent machines with faster CPU run at the same rate as slower machines
- E. to ensure all the data for response time breakdown is time-stamped using the time from the workbench machine

Correct Answer: C

QUESTION 3

Why would a tester want to substitute a datapool candidate?

- A. A new value can be provided for each virtual tester, to ensure more realistic playback.

- B. A new value can be captured for each session, to ensure more realistic recording.
- C. The data correlation will fail if the candidate is not substituted with the value returned by the server.
- D. The datapool will never get filled up with data unless it is connected to the test at playback time.

Correct Answer: A

QUESTION 4

Where can you observe verification point results?

- A. The Verification Point report will provide details of the Verification points over the duration of the test.
- B. The HTTP performance report has a bar chart for Verification Point results on the overall tab.
- C. The test log presents detailed Verification Point results.
- D. All of the above

Correct Answer: A

QUESTION 5

What is the main difference between correlated and pooled data?

- A. Correlated data all comes from the same row of the table, while pooled data uses a different line for each request.
- B. A separate copy of correlated data is owned by each test agent, while pooled data is shared across all agents.
- C. Correlated data is varied at runtime, while pooled data is varied at record time.
- D. Correlated data is varied by the server, while pooled data is varied by the client.

Correct Answer: D
