### QUESTION 1

A cluster is a member of a service integration bus (SIBus) and is configured with the high availability messaging engine policy.

How should a system administrator configure JMS messaging so that message-driven beans (MDBs) on all cluster members can get messages?

- A. Enable the JMS activation specification option: Always activate MDBs in all servers.
- B. Enable the JMS destination option: Do not prefer a local queue point over other queue points.
- C. Set the scope of all JMS destinations to the cluster that is a member of the SIBus.
- D. Set the scope of the JMS connection factory to the cluster that is a member of the SIBus.

Correct Answer: A

---

### QUESTION 2

A system administrator needs to configure a new way to manage applications using the monitored directory deployment feature. How can the administrator enable it? The feature...

- A. can only be enabled in the Integrated Solutions Console (ISC).
- B. can be enabled using the Integrated Solutions Console (ISC) or wsadmin.
- C. is only available for a stand-alone server profile and is enabled by default.
- D. is enabled by default for both a stand-alone and network deployment editions.

Correct Answer: B

---

### QUESTION 3

A system administrator needs to connect to a database from an enterprise application where global security is enabled. What security object should the administrator use?

- A. Security certificate
- B. J2C authentication alias
- C. Basic authentication token
- D. Local operating system (local OS) user id

Correct Answer: B

---

#### QUESTION 4

Consider the Exhibit,

a report generated by the IBM Support Assistant (ISA) that reveals a prevailing problem within a WebSphere Application Server environment. What should the administrator do?

- A. Increase the amount of physical memory for the server.
- B. Ensure that all connections taken from the data source are returned to the pool.
- C. Determine why the collection class increases in size and consumes memory.
- D. Modify the application so it uses stateless instead of stateful session beans to conserve the heap.

Correct Answer: C

#### QUESTION 5

A system administrator must deploy a new application that uses Java 2 security. There are several applications installed in the cell that use application security but not Java 2 security. How can the administrator enable support for Java 2 security without affecting the other applications?

- A. Enable Java 2 security at the cell level and grant permissions only to the new application.
- B. Configure a security domain with Java 2 security enabled for the application server that will host the new application.
- C. Configure a security domain for the other applications in the cell with both Java 2 security enabled and application

security.

D. Disable global security and configure a security domain with Java 2 security enabled for the application server that will host the new application.

Correct Answer: B
