### QUESTION 1

Which of the following is a potential consequence when using an external session management store over a server level store?

- A. A server level store makes a smaller footprint.
- B. Only half the current sessions can be saved externally.
- C. External session management stores can use additional system resources.
- D. Using an external session management store takes 10X as long to rebuild the session after a failure.

Correct Answer: C

External session management stores can use additional system resources.

### QUESTION 2

What data source property can an administrator configure to minimize the chances of encountering StaleConnectionExceptions?

- A. Minimum connections = 0
- B. Reap Timeout
- C. Purge Policy = FailingConnectionOnly
- D. Unused Timeout > Half firewall timeout

Correct Answer: A

The configuration options below help minimize the chances of encountering StaleConnectionExceptions by helping to ensure that your WebSphere Application Server maintains control of database connections, specifically, the only one closing them, rather than other components in your network: The datasource MIN connections should be set to 0. By setting a MIN > 0, you are telling the application server that this number of connections will be valid for the life of the application server JVM. Unless you can guarantee the MIN number of connections will never be timed out or dropped, setting a MIN will cause

a StaleConnectionException when the connection becomes invalid.

### QUESTION 3

Which of the following describes how communication occurs when a Web Services client sends a request to an application server?

- A. Through SOAP over HTTP and passing through the web services engine

- B. Through SOAP over JMS and passing through the embedded HTTP server
- C. Through RMI over IIOP communication directly to the messaging engine within the application server
- D. Through SOAP over JMS communications directly to the messaging engine within the application server

Correct Answer: D

---

#### QUESTION 4

What is the default location for heap dumps?

- A. /logs
- B. /profiles/logs
- C. /logs/server1
- D. /

Correct Answer: D
