QUESTION 1

Which of the following describes how communication occurs when a Web Services client sends a request to an application server?

- A. Through SOAP over HTTP and passing through the web services engine
- B. Through SOAP over JMS and passing through the embedded HTTP server
- C. Through RMI over IIOP communication directly to the messaging engine within the application server
- D. Through SOAP over JMS communications directly to the messaging engine within the application server

Correct Answer: D

QUESTION 2

When verbose Garbage Collection is enabled, in which file(s) does the operating system collect the data?

- A. trace.log
- B. activity.log
- C. SystemOut.log and SystemErr.log
- D. native_stdout.log and native_stderr.log

Correct Answer: D

Depending on the operating system in use, the verboseGC output will be written to the following file by default: AIX, Linux, or Windows: native_stderr.log Solaris or HP-UX native_stdout.log

QUESTION 3

When administrative security is enabled, what is the minimum administrative role needed to create a resource, install, and uninstall an application?

- A. Monitor
- B. Operator
- C. Configurator
- D. Administrator

Correct Answer: B

An individual or group that uses the configurator role has the monitor privilege plus the ability to change

the WebSphere Application Server configuration. The configurator can perform all the daily configuration tasks. For example, a configurator can complete the following tasks:

Create a resource.

Map an application server.

Install and uninstall an application.

Deploy an application.

Assign users and groups-to-role mapping for applications.

Set up Java 2 security permissions for applications.

Incorrect Answers:

A: An individual or group that uses the monitor role has the least amount of privileges. A monitor can complete the following tasks:

View the WebSphere Application Server configuration.

View the current state of the Application Server.

C, D: Not minimal roles.

QUESTION 4

When installing IBM WebSphere Application Server on a network file system, IBM Installation Manager fails with an insufficient disk space error.

How could this be resolved?

A. Increase disk space and try again.

B. Delete temporary files and try again.

C. Reboot operating system and try again.

D. Disable disk space checking in the config.ini and try again.

Correct Answer: D

On some network file systems, disk space might not be reported correctly at times; and you might need to bypass disk-space checking and proceed with your installation. To disable disk-space checking, specify the following system property in the config.ini file in IM_install_root/eclipse/configuration and restart Installation Manager.

QUESTION 5

An administrator has made a configuration change to a server in network deployment topology.

Which statement describes the synchronization process in this scenario?

- A. Configuration changes on a server are prohibited.
- B. Node agent synchronizes its files with the master repository.
- C. Configuration changes are maintained on the node's master repository.
- D. Node agent synchronizes its files with the master repository when the deployment manager is restarted.

Correct Answer: C
