QUESTION 2

An administrator noticed that one of the servers in the core group is experiencing OutOfMemory. As a result, other servers in the core group failed to start.

What core group custom property should the administrator tune to prevent the affected server from impacting other servers in the core group?

- A. IBM_CS_OOM_ACTION
- B. IBM_CS_DATASTACK_MEG
- C. IBM_CS_WIRE_FORMAT_VERSION
- D. IBM_CS_HAM_PROTOCOL_VERSION

Correct Answer: A

Use this custom property to explicitly enable exception handlers that are specific for OutOfMemoryExceptions that occur when sending or receiving network messages. When this property is set to Isolate, if an OutOfMemoryException occurs when a network message is being sent or received, these exception handlers stop High Availability Manager communications to the Out of Memory process.

If IBM_CS_OOM_ACTION=Isolate is not added to the configuration settings for a core group, if a core group process runs out of memory, the Out of memory process might not be able to respond to all messages. This situation prevents multi- step protocols from completing, and prevents the starting server from receiving its initial view of the distributed state.

QUESTION 4

Which statement describes the functionality of web containers?

- A. Web containers forward EJB requests to the EJB container.
- B. Web containers process JSPs, servlets, and various server-side objects.
- C. Servlets requests are forwarded from an EJB container to a web container.
- D. Each application server can contain multiple web containers, depending upon the number of JSPs and servlets.

Correct Answer: B

The runtime environment for Web components is called the Web container. It processes servlets, JSP files, and other types of server-side components.

QUESTION 5

When updating an application, what is important to keep in mind?

- A. The application is only updated during the next server restart.
- B. The application is automatically stopped, updated, and restarted.
- C. The application is only updated during the next restart of the application.
- D. The application is stopped, updated, and restarted at the scheduled time.

Correct Answer: B

If the application is updated while it is running, WebSphere Application Server automatically stops the application,

updates the application logic and restarts the application.
