QUESTION 1

A solution developer uses a JavaCompute node to implement the mapping in a message flow. As part of that mapping, the developer used a Java class from an external library. The class is defined to throw an exception.

How should the developer handle the exception in the JavaCompute node to capture the exception details and escalate to the default flow error handling?

- A. Create and throw a MbException.
- B. Create and throw a MbUserException.
- C. Create and throw a MbBrokerException.
- D. Use the addNestedException method of the MbException class to escalate the exception.

Correct Answer: A

QUESTION 2

A solution developer is building a solution that integrates with a COBOL application. The COBOL copybook that defines the record layout is available to the solution developer.

What should the developer do to make use of the latest IBM Integration Bus V9.0 features and create a new message model in the least number of steps?

- A. Use the `mqsicreatemsgdefscmd` to import the COBOL copybook.
- B. Use the DFDL schema editor to define the message model manually using the COBOL copybook as a guide.
- C. Use a wizard to select the COBOL message type, choose the "Create a DFDL schema file by importing a COBOL copybook or program", and then select your copybook to import.
- D. Use a wizard to select the COBOL message type, choose the "Create a MRM message definition by importing a COBOL copybook or program", and then select your copybook to import.

Correct Answer: C

QUESTION 3

A solution developer is using the DataPower Security Wizard to configure an HTTP Input node. In the IBM Integration Explorer, the solution developer needs to merge new request and response rules into an

existing DataPower XML Firewall policy. When the developer does the merge a new policy is created. What can the developer conclude from this result?

- A. The Policy Set binding is not configured.
- B. The DataPower XML Firewall policy does not exist.
- C. The DataPower existing XML Firewall settings have been altered.

D. The connection to the DataPower Security Wizard failed because SSL cert is invalid.

Correct Answer: C

QUESTION 4

A solution developer wants to add meta information to a message flow that is to be deployed to the integration node. The meta information should be accessible at runtime using the IBM Integration Explorer. The flow processes MQ messages, contains a subflow and uses a JavaCompute node for the implementation of the mapping logic.

How does the developer include the name of the author so it is clearly associated with the deployed Java code?

- A. Add an MQSI keyword as a comment into the Java code.
- B. Add the author's name in the Short Description field of the JavaCompute node.
- C. Add an MQSI keyword into akeywords.txtfile located in the META-INF folder of the JAR.
- D. Create a .propertiesfile with the author's name in the project source folder of the JavaCompute node.

Correct Answer: C

QUESTION 5

In a data analysis project, a set of sample XML documents are analyzed according to:

- A. business rules.
- B. a validation stylesheet.
- C. the content of the data.
- D. the structure of the schema.

Correct Answer: C
