QUESTION 1

A BPM Application developer is testing and debugging a recently developed heritage human service:

A service debugger is being used and a JavaScript logic error is detected on completion of the Preprocessing script- certain variable values are incorrect. The BPM application developer wishes to correct the relevant variable values and then proceed with testing/debugging the rest of the service. How can the BPM application developer set the variables to their correct values?

- A. Edit variables in the service debugger browser window
- B. Edit the pre-processing script to correct the logic and re-run the pre-processing script
- C. in the inspector perspective, use the execution evaluator, enter JavaScript to change the values
- D. in the inspector perspective double click on the relevant variable and change the values in the variables window.

Correct Answer: D

QUESTION 2

A BPM application developer is building a case type. The BPM application developer has a wide range of existing BPM components available and wants to reuse as many of them as possible. Which BPM implementation types can the BPM application developer use to build case type activities?

- A. Script, Subprocess and User Task
- B. Script, System Task and User Task
- C. Linked Process, Subprocess and User Task
- D. Linked Process, Subprocess and System Task

Correct Answer: C

QUESTION 3

A company requires an automated process to send email reminders to its employees on the first day of each month. How should the BPM application developer implement this?

- A. Use the BPM scheduler service which will use the IBM BPM REST API to start the process.
- B. Configure a start message event in the business process diagram (BPD) and attach it to a time elapsed undercover agent.

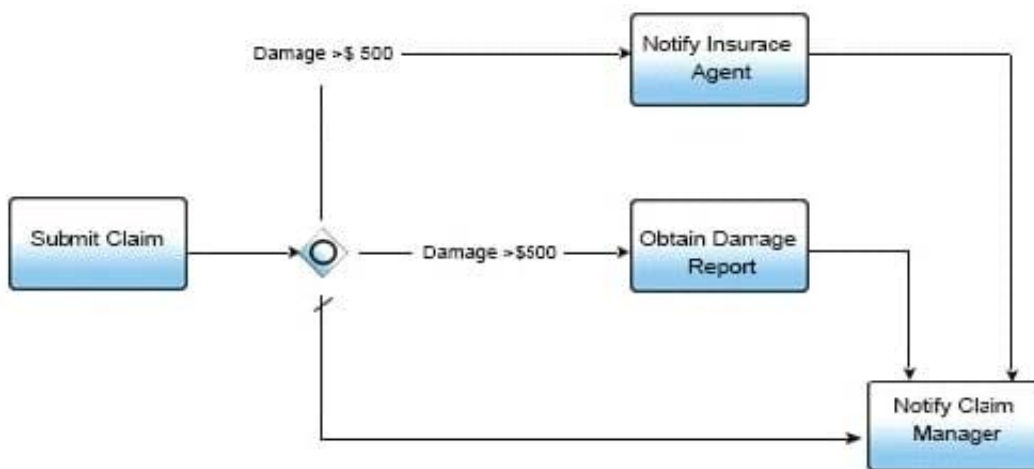

C. Add an intermediate timer event which fires on the first of each month followed by a loop back to the beginning of the process.

D. Create a separate business process diagram (BPD) that polls the current date and starts the other process if it is the first of the month.

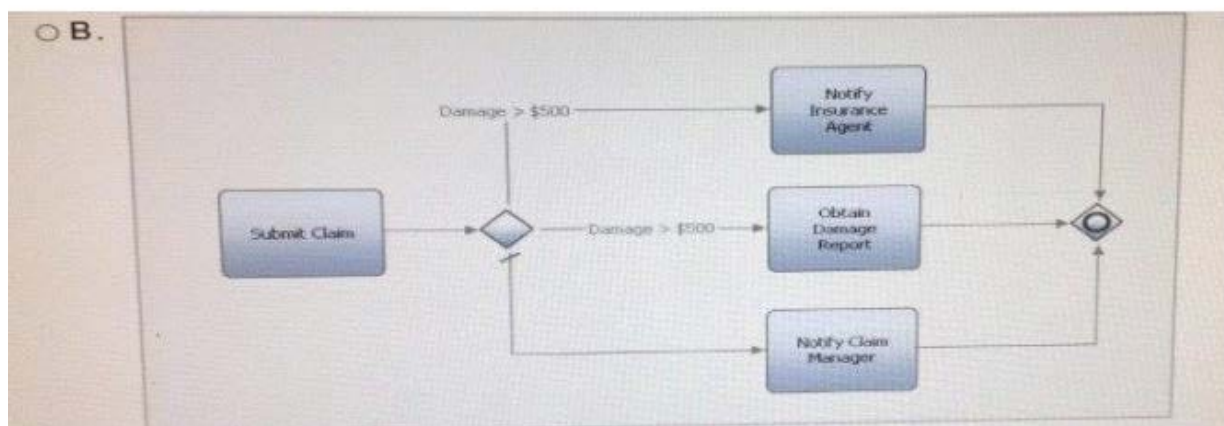

Correct Answer: B

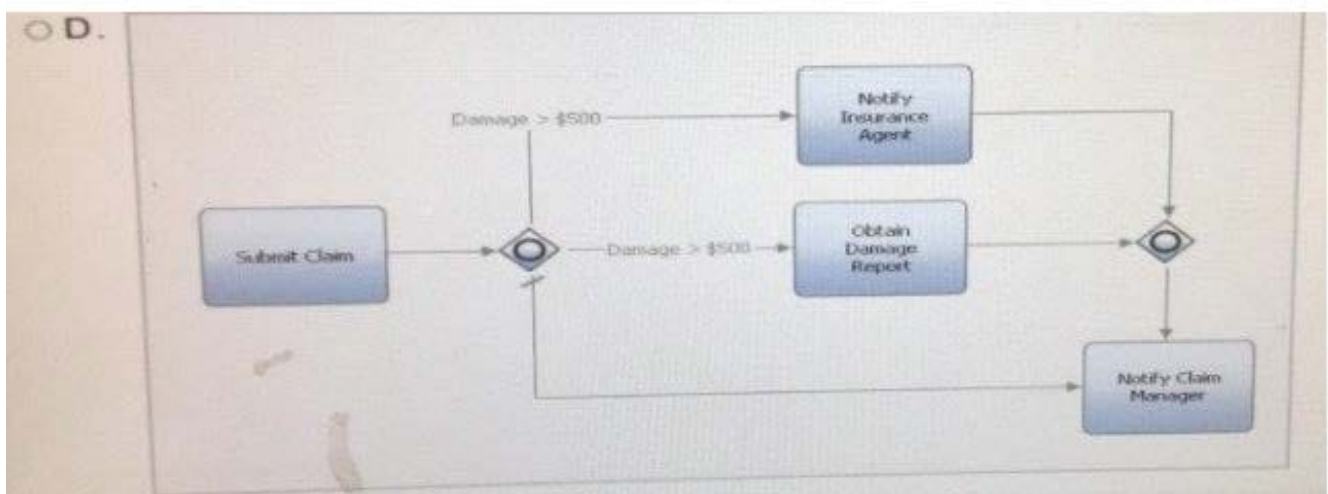

QUESTION 4

Per the following exhibit, when a claim is submitted, the claim manager must be notified. If the claim damage is more than \$500, a damage report must be provided and the insurance agent will be notified. In some cases, the claim manager will receive duplicate notifications from the claim submission process.

Which option will eliminate the duplicated notifications problem?

A. Exhibit A

B. Exhibit B

C. Exhibit C

D. Exhibit D

Correct Answer: B

QUESTION 5

A company uses credit scores of their consumers to decide if further checks are necessary before sending out the products. Further checks are required when credit score falls below a threshold. The company must be able to change the threshold value at a designated date and time without having to deploy a new version. What must BPM application developer use to provide the functionality?

A. A global process variable

B. A shared business object

C. An environment variable

D. An exposed process value

Correct Answer: C
