### QUESTION 1

A tire production company requests to be informed via email if a new customer request approvals take too long. If 20 approval steps take longer than 2 hours, management must be informed.

How does a BPM application developer solve this request?

The BPM application developer creates:

- A. A scheduler which queries the database and sends mail if the condition is met.
- B. a SLA with a "Violated N times over period" trigger and "send mail to" as the consequence.
- C. A SLA with a "Violated N times over period" trigger and "starts a service" as the consequence.
- D. Trackini points or activates auto trackini and creates a report which shows the required approval-period. The customer can supervise the SLA themselves.

Correct Answer: C

### QUESTION 2

A BPM application developer has enabled auto-tracking for a car tire production and run the update tracking definitions command in process designer. During a playback, the BPM application developer is asked to rename the auto-tracking group from "at1392376481525" to "tireProduction" and run update tracking definitions again. When building a custom dashboard, what resource should the BPM application developer use to retrieve the data?

- A. The "tireProduction" view for the "tireProduction" table.
- B. The "tireProduction" view for the "at1392376481525" table.
- C. The "at1392376481525" view for the "tireProduction" table.
- D. The "at1392376481525" view for the "at1392376481525" table.

Correct Answer: B

### QUESTION 3

A BPM Application developer is testing and debugging a recently developed heritage human service:

A service debugger is being used and a JavaScript logic error is detected on completion of the Preprocessing script- certain variable values are incorrect. The BPM application developer wishes to correct the relevant variable values and then proceed with testing/debugging the rest of the service. How can the BPM application developer set the variables to their

correct values?

- A. Edit variables in the service debuier browser window
- B. Edit the pre-processini script to correct the loiic and re-run the pre-processini script
- C. in the inspector perspective, use the execuon evaluator, enter JavaScript to chanie the values
- D. in the inspector perspective double click on the relevant variable and chanie the values in the variables window.

Correct Answer: D

---

#### QUESTION 4

An existni Case Type implementaton is initated either by addini documents of a specific document type to the BPM document manaiement environment or manually by knowledie workers. Now, the case type needs to be enhanced, to initiate case instances proirammatcally.

How does the BPM applicaton developer provide the capability?

- A. Draii the case type onto a swim lane
