QUESTION 1

A BPM application developer needs to create a custom report for a set of job applications to support the hiring request process. The process owner is the hiring manager. The custom report must show up as a tab at the top of the process portal, and it can only be accessed by the human resources managers team.

How must the BPM application developer configure the coach to satisfy this requirement?

- A. Set the "Expose As" field to URL.
- B. Set the "Expose As" field to Dashboard.
- C. Set the "Expose As" field to Startable Service
- D. Set the "Expose As" field as Custom Report.

Correct Answer: C

QUESTION 2

A BPM Application developer needs to customize the Process Performance and Team Performance dashboards to meet corporate requirements. To do so, what should BPM application developer do?

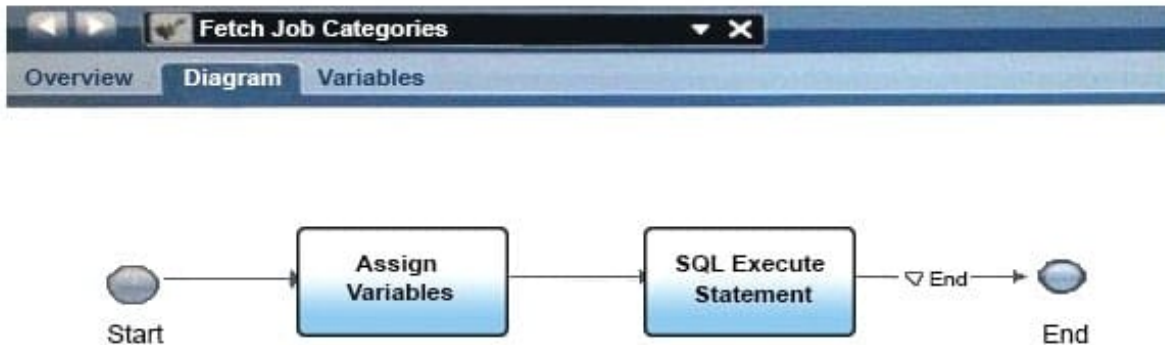

- A. Make the dashboards editable in the dashboards toolkit, make the changes, take a new snapshot, and deploy the toolkit.
- B. Clone the most recent snapshot of the Dashboards toolkit, make the changes, take a new snapshot, and deploy the toolkit.
- C. Clone the most recent snapshot of the Process Portal Application, make the changes and deploy the customized Portal Process application.
- D. Create new Process and Team Performance dashboards in a new process application, configure Process Portal to use the new dashboards, and deploy the process application

Correct Answer: B

QUESTION 3

A BPM application developer would like to retrieve the Job Categories for a job position from the database. The BPM application developer has created the following integration service "Fetch Job Categories" to connect with the database and to retrieve the job categories.

What does the BPM application developer need to do to implement this service successfully? (choose 2)

- A. Specify the data mapping fields for the SQL Execute Statement.
- B. Provide the Java implementation for the SQL Execute Statement.
- C. Create a data source in the process admin console for this application database.
- D. Select Local in the Local/Global transaction field in the SQL Execute Statement Configuration.
- E. Use a data source defined in the WebSphere Application Server for this application database.

Correct Answer: CE

QUESTION 4

A company uses credit scores of their consumers to decide if further checks are necessary before sending out the products. Further checks are required when credit score falls below a threshold. The company must be able to change the threshold value at a designated date and time without having to deploy a new version. What must BPM application developer use to provide the functionality?

- A. A global process variable
- B. A shared business object
- C. An environment variable
- D. An exposed process value

Correct Answer: C

**QUESTION 5**

A multinational corporation requires their coaches to be translated into the users' native languages. A BPM application developer has not provided translations for all the languages. What must the BPM application developer do to handle situations

where a user's selected language is not supported and a default is required?

To designate the default label, the BPM application developer must create:

- A. a coach view configuration option for the default label
- B. a localization resource with a default local key, and create a default local value
- C. a key-value pair list local variable and set the label to the default local key in the user's browser
- D. a default label using an environment variable and set it to the default language in the user's active directory profile

Correct Answer: C
